CORE CURRICULUM FOR COLON AND RECTAL SURGERY RESIDENTS

The goal of the Colon & Rectal Surgery Residency Training Program is to train safe, competent and confident surgeons who are experts in the field of colon and rectal surgery and are committed to ongoing learning through study and assessment of their outcomes. Graduates of the program will be committed to and capable of making significant contributions to the field of colon and rectal surgery through teaching, leadership and scholarship.

PATIENT CARE

GOALS
The competency of patient care is the foundation of a physician’s education, as patient care is the basis for our profession. All the other competencies should improve patient care. Graduates of a colon and rectal surgery residency will be able to provide patient care that is compassionate, appropriate and effective for the treatment of colorectal health problems and the promotion and maintenance of health.

OBJECTIVES
Following satisfactory completion of a residency in colon and rectal surgery, residents should be able to:

1. Gather accurate and essential information about their patients
2. Perform a thorough and competent patient assessment, and demonstrate the ability to make appropriate decisions about the treatment choices including the need for surgery independently.
3. Make informed decisions about diagnostic and therapeutic interventions based on current scientific evidence, patient information and preferences, and clinical judgment
4. Develop and carry out outpatient management plans
5. Counsel and educate patients and their families using effective communication skills and caring and respectful behaviors
6. Articulate the rationale for approaches, decisions, and judgments to patients and their families as well as other healthcare providers
   Competently perform all medical management and invasive procedures considered essential in the field of colon and rectal surgery, including abdominopelvic and anorectal operative procedures, diagnostic and therapeutic colonoscopy, anorectal ultrasound, and anorectal physiology testing and its interpretation
8. Demonstrate competence in the application of clinical and basic science knowledge to make sound preoperative and intraoperative decisions and to cope with unexpected findings or developments in the operating room independently
9. Provide safe and competent perioperative care, including the timely recognition and management of surgical complications
10. Work effectively with healthcare professionals from a broad spectrum of other disciplines to provide patient-focused care
11. Provide healthcare services aimed at preventing health problems and maintaining health

Examples of specific activities which may be used to improve patient care skills and to evaluate the resident’s progress may include but are not limited to:

1. Allowing the resident to meet with patients and their families in the outpatient clinic to discuss the reason for their consultation and the appropriate surgical and nonsurgical treatment options
2. Having the resident participate in the formulation of a care plan for the patient
with the supervision of the attending surgeon, including a discussion of risks, benefits and alternatives of proposed treatments, and obtaining informed consent for proposed surgical and endoscopic procedures.

3. Having the resident perform a wide variety of abdominal, anorectal and endoscopic procedures either as the surgeon or as the first assistant. All procedures are performed under the direct supervision of an attending physician who ensures that the resident is functioning in a skillful and safe manner. Patient safety is paramount at all times.

4. Allowing the resident to participate with the attending surgeon in formulating a postoperative care plan, and to communicate this to the patient.

5. Having the resident see patients on rounds in the hospital with faculty and discuss progress with patients and their families.

6. Involving the resident in multidisciplinary discussions with the patient, family, nurses, dieticians, social workers, and other healthcare personnel as appropriate.

7. Having the resident follow the patient in the clinic after discharge from the hospital to ensure that the postoperative plans have been implemented and remain effective.

8. Supporting the resident's participation in the preparation and presentation of educational conferences, such as Journal Club and Morbidity and Mortality Conference, which provide the resident the opportunity to review scientific evidence relating to the treatment of patient problems and to improve his/her own practice based on appropriately gathered data and feedback.

9. Encouraging the completion of evaluations by non-physician healthcare personnel who have had sufficient opportunities interacting with the resident to evaluate his/her patient care skills and respectful treatment of patients and co-workers. Patients and family members are in a unique position to evaluate the resident's interpersonal and communication skills.

Examples of tools that may be used to assess patient care skills include, but are not limited to:

1. CARSEP or CARSITE
2. Chart-stimulated recall
3. Checklist
4. Direct observation of resident practice
5. Mock oral examination
6. Objective Structured Clinical Examination (OSCE)
7. Portfolios
8. Procedure and case logs
9. Record review
10. Simulations and models
11. Standardized patients
12. 360 degree global evaluation

PROFESSIONALISM
Colorectal surgery residents should demonstrate a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.

GOALS
After satisfactorily completing a residency in colon and rectal surgery, residents are expected to:

1. Be able to define patient welfare, patient autonomy and social justice and provide examples of how the primacy of these principles shapes the practice of colon and
rectal surgery
2. Deliver superior quality care while demonstrating core professional behaviors in all professional activities
3. Practice medicine ethically consistent with all the obligations of a physician.
4. Be able to define the essential attributes of professionalism and describe how they apply in the practice of colon and rectal surgery

OBJECTIVES

Following completion of a residency in colon and rectal surgery, the resident should be able to describe, define, or demonstrate the following for each of the core professional behaviors or attributes listed here:

1. Competence
   a. Describe and participate in the process for professional certification and maintenance of certification in colon and rectal surgery
   b. Define the scope of practice of the specialty of colon and rectal surgery
   c. Describe and abide by the process for training and adding privileges for new technology

2. Altruism
   a. Secure effective continuity of care for patients in the context of duty hour restrictions

3. Morality and ethics
   a. Disclose potential conflicts of interest (financial, personal, professional) and manage potential conflicts of interest appropriately
   b. Respect appropriate boundaries in personal interactions with patients, students, and other healthcare providers and avoid exploiting them for any purpose
   c. Appropriately disclose advertising and public relations releases
   d. Support and participate in ethics review processes on research involving human subjects

4. Integrity and honesty
   a. Disclose appropriately to patients and family members the therapeutic options, with risks and benefits of each
   b. Disclose adverse events and medical errors fully
   c. Know and abide by Health Insurance Portability and Accountability Act (HIPAA) regulations
   d. Avoid disclosure of identifiable medical information to any person or entity without proper authorization from the patient or his/her guardian or power of attorney, as appropriate

5. Self-regulation

6. Responsibility to society and to the profession
   a. Support the specialty board responsibility to insure that all of its members are competent
   b. Describe individual physician responsibilities regarding proper disclosure of and remediation for impaired/incompetent physicians/colleagues
   c. Balance commitment to patient confidentiality with overriding public interest considerations, as when patients endanger others
   d. Understand the role and responsibilities of colorectal surgeons in giving expert
testimony in legal proceedings

e. Actively engage in educating patients, students, and other healthcare professionals

7. Advocacy
8. 
   a. Work collaboratively with other professionals to reduce medical errors, increase patient safety, and minimize overuse of healthcare resources
   b. Participate in quality improvement initiatives to measure and improve individual and systems performance
   c. Recognize barriers to care based on education, laws, finances, geography, and social discrimination and discuss potential solutions
   d. Promote public health and preventive medicine
   e. Provide health care based on wise and cost-effective management of limited clinical resources for example, avoiding ordering unnecessary tests and procedures

Professional behavior
   a. Demonstrate sensitivity and respect in all patient interactions, honoring patients’ individual characteristics (for example: culture, age, gender, disabilities); acknowledging and honoring the vulnerability of patients with colorectal problems; and acknowledging and honoring patients’ psychological, social, cultural, and spiritual needs when dealing with issues such as body image alterations, ostomies, and diagnosis of terminal illness
   b. Embrace the colorectal surgeon’s responsibility for providing comprehensive and continuous patient care through the preoperative diagnosis phase, during the operation, and during postoperative care
   c. Include in surgical care the needs of the terminally ill by identifying and discussing, as appropriate, the ethical issues surrounding end of life situations (such as Do Not Resuscitate/DNR, advanced directives, withdrawal of life support, withholding support/care and futile care)
   d. Understand and demonstrate the multifaceted role of colorectal surgeons, for example: consultant surgeon giving a second opinion; diagnostic consultant providing a service (transrectal ultrasound, anorectal physiology testing, colonoscopy); patient advocate addressing previous suboptimal care with patients, families, or responsible physician; patient advocate in managed care organizations; and integral member of multidisciplinary teams with nurses, ancillary services, and primary care physicians

Examples of tools that may be used to assess professionalism skills include, but are not limited to:
1. Direct observation of resident interactions
2. Discussion Seminar (e.g. complex psychosocial issues and ethical dilemmas in colorectal surgery patients)
3. Observation of or participation in an ethics review committee
4. Online learning modules (e.g. multicultural awareness)
5. Patient survey of resident interactions
6. 360° global evaluation
7. Videotaped session of resident interaction with patients or simulated patients

GOALS:
INTERPERSONAL AND COMMUNICATION SKILLS
Residents should demonstrate interpersonal and communication skills that result in the effective exchange of information and collaboration with patients, their families, and health professionals.
Residents are expected to:
1. Communicate effectively with patients, families, and the public, as appropriate, across
a broad range of socioeconomic and cultural backgrounds

2. Communicate effectively with physicians, other health professionals, and health related agencies

3. Work effectively as a member or leader of a health care team or other professional group

4. Act in a consultative role to other physicians and health professionals

5. Maintain comprehensive, timely, and legible medical records.

OBJECTIVES
The resident will create an environment supportive of communication for the patient and his/her family by:

1. Demonstrating caring and respectful behaviors, including greeting patients using appropriate titles; gaining and maintaining an awareness and respect of cultural, religious, moral and gender/sexual background of the patient and family; speaking on a similar physical level, e.g., both sitting or both standing

2. Eliciting the patient's perspective on his/her own illness; expressing a desire to work with the patient; showing interest in the patient as a person exclusive of his/her medical concern

3. Using language that is understandable and demonstrates concern, and using non-verbal cues (including appropriate eye contact and hand shaking, postures, nodding) to acknowledge and affirm communication

4. Eliciting patient-related information with effective interview skills, asking open ended questions as appropriate, and refrain from interrupting patients' sentences/thoughts

5. Discussion of management options with appropriate acknowledgement of patient preferences; identify one's own biases when advising patients

6. Assess patient's understanding of encounter, summarize the encounter, and allow for follow-up questions for clarification as needed

7. Obtain informed consent in language understandable to the patient, including the disease/diagnosis being treated, the treatment options and the treatment to be performed, and common and most relevant complications

8. When giving bad news, the resident will introduce the topic in private, using empathetic and non-threatening verbal and non-verbal expressions; provide the news calmly and honestly, along with information leading to this point; allow patient/family to ask questions to ensure mutual understanding and respond empathetically; develop a prioritized plan; and identify sources of support.

The resident will communicate with other professionals as a leader of the healthcare team by:

1. Providing appropriate information to direct interdisciplinary care, always acting in the best interest of the patient

2. Providing transition or “hand-off” information that is orderly, timely and written; contains pertinent diagnoses, procedures performed, and complications or other factors affecting care

3. Maintain appropriate verbal and written correspondence with referring physicians

4. Manage medical record-keeping in a timely and legible way, ensuring compliance with institutional policies and HIPAA regulations and protecting patient privacy at all times

Examples of tools that may be used to assess communication include, but are not limited to:

1. Cinemeducation
2. Direct observation of resident interactions
3. Role modeling
4. Role playing
5. Self assessment
6. Standardized patient evaluations
7. 360° global evaluation
8. Video/Audio taping
GOALS:

PRACTICE-BASED LEARNING AND IMPROVEMENT

At the completion of training in colon and rectal surgery, the resident should be able to investigate and evaluate their patient care practices, appraise and assimilate scientific evidence, and develop tools to improve their patient care practices.

OBJECTIVES

Following completion of a residency in colon and rectal surgery, the resident should be able to:

1. Analyze practice experience and perform practice-based improvement activities using systematic methodology such as:
   a. Participation in Journal Club and/or Evidence Based Reviews of Colon and Rectal Surgery to gain sufficient understanding of study design, statistical methods, quality of evidence, and interpretation of findings and outcomes to critically appraise information on diagnostic and therapeutic effectiveness
   b. Participation in Morbidity and Mortality Conference, SCIP, NSQIP, or other quality improvement initiative as available, and use the information and experience gained to modify his/her practice accordingly

2. Attempt a research project to contribute to the development of new knowledge, being aware of the importance of peer review of research protocols, ethical considerations in basic and clinical research, and the limitations and obstacles that may be encountered in pursuing a research project

3. Use information technology to manage information access quality on-line medical information, and support their own education, which may include:
   a. Proficiency in use of on-line libraries for literature searches to locate and integrate information from a variety of sources
   b. Familiarity with practice parameters in the field of colon and rectal surgery
   c. Familiarity and participation in CREST as it becomes available

4. Facilitate the learning of residents, students and other healthcare professionals, which may include:
   a. Supervising and educating medical students and/or general surgery residents in colorectal surgery
   b. Demonstrating the skills to educate colleagues, patients, families, and other healthcare professionals
   c. Presenting cases and lecturing

Develop, implement, and monitor a personal strategy for continuing education, which may include:

a. Maintenance of Certification (MOC) b. Continuing Medical Education (CME) activities c. Attendance at national meetings d. Participation in Evidence Based Reviews (EBR) in colon and rectal surgery e. Regular reading of peer-reviewed journals f. CARSEP review

Examples of tools that may be used to assess practice based learning skills include, but are not limited to:

1. Active participation in Morbidity and Mortality conference
2. Active participation in Journal Club and Evidence Based Reviews in Colon and Rectal Surgery
3. Resident portfolios tracking learning improvement projects
4. Research projects or literature contributions in the field of colon and rectal surgery
5. Evaluation of resident presentations at conferences and grand rounds
6. Evaluation of resident teaching skills by medical students, residents, patients and ancillary staff
GOALS:

SYSTEM BASED PRACTICE
Residents should demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to effectively identify and utilize other resources in the system to provide optimal health care.

OBJECTIVES
Following completion of a residency in colon and rectal surgery, residents should be able to:
1. Understand how their patient care and other professional practices affect other healthcare professionals, the healthcare organization within which they work, and society at large, and how these elements of the healthcare system in turn affect their practice of colorectal surgery, by:
   a. Incorporating considerations of cost and risk-benefit analysis in patient care and/or population-based care as appropriate
   b. Demonstrating an understanding of the role of different specialists and other health care professionals in overall patient management, and recognizing the need for referral to other subspecialists as indicated
   c. Acknowledging resource limitations, including availability of the operating room, in managing the conflicting duty of providing both elective and emergency surgical care
   d. Understanding management fundamentals including triage, communication, manpower management, and resource conservation
   e. Be able to discuss the impact of the Health Insurance Portability and Accountability Act (HIPAA) and Emergency Medical Treatment and Labor Act (EMTALA) regulations on the resources of various medical systems, including rules for transfer of patients to the hospital under HIPAA regulations
   f. Know and comply with appropriate privacy-regulation compliant correspondence with referring physicians
   g. Gather information about the community in which one works (e.g., demographics, and sociocultural beliefs and practices) that affect health and disease
   h. Providing a leadership role in the management of complex care plans

2. Gain and demonstrate an understanding of how types of medical practice and delivery systems differ, including methods of controlling healthcare costs and allocating resources such as:
   a. The cost of doing business, involving such issues as insurance providers, physician contracts, and office expenses including equipment and personnel. An understanding of proper coding terminology, levels of care, and supporting evidence used in billing for medical services should be learned
   b. The discharge planning process, including end-of-life care, home healthcare services, medications, equipment, transportation, nutrition, rehabilitation services, therapy services, nursing home services, assisted living services and appropriate follow-up care
   c. Methods by which individuals or hospitals can be reimbursed, including fee-for-service, capitation and hospital DRGs

3. Practice cost-effective healthcare with wise resource allocation that does not compromise quality of care with a knowledge of:
   a. Understanding, accessing, utilizing, and evaluating effectiveness of resource providers, and systems to provide optimal emergency care
   b. The major causes of re-hospitalization and loss to follow up as aids to determine possible approaches for remedying poor care transitions
   c. Cost effective treatment of colorectal surgical diseases including financial costs, risks
and benefits of all proposed diagnostic and therapeutic procedures; and how to
determine and convey to appropriate individuals the instruments and other materials
necessary for all procedures in order to minimize waste of resources
d. Consideration of the cost-effectiveness of new surgical technologies
e. Applying systematic, evidence-based, cost conscious and cost-effective strategies to
prevention, diagnosis and treatment in a way that does not compromise quality of care
4. Advocate for quality patient care within the system, assist patients in navigating the
system to obtain resources, and be the patient’s advocate in dealing with system
complexities through activities such as:
a. Participation in interdisciplinary teams, particularly as it relates to quality of patient care
and system issues
b. Accepting the specialist’s role to intervene on behalf of patients with respect to the
social, economic and biologic factors that may impact on their health and the
community health
c. Observing and learning the complexities of processing a patient through initial
registration, acquisition of third party payer approval, interface with nursing personnel,
the outpatient clinic visit, acquisition of test results, operative scheduling, admission to
the post-anesthesia care area, and discharge
d. Understanding the financial implications of surgical treatment, including hospital and
physician charges, loss of employment time, outpatient chemotherapy, and nursing
home care

Know how to partner with healthcare managers and healthcare providers to assess,
coordinate, and improve healthcare, and know how these activities can affect system
performance by:
a. Participation in National Quality Assurance initiatives such as the Joint Commission,
core measures, and SCIP programs including but not limited to DVT prophylaxis, managing
concentrated injectable medicines, assuring medication accuracy at transitions in care,
communicating during patient handovers, improving hand hygiene to prevent infections
associated with health care, and performing correct procedures at correct body sites
b. Understanding the process of credentialing and hospital privileging

c. Participation in multi-disciplinary teams with nursing and allied health staff to improve
provider-to-provider and provider-to-patient communication in patient transitions of care,
including the critical elements of an effective discharge summary; improve sign-out rounds to
enhance patient safety and reduce the risk of adverse outcomes; and conduct quality
assurance reviews to improve patient safety
Participate in identifying system errors and implementing potential systems solutions
including:
a. Identification and implementation of solutions for systems issues related to medical
errors
b. Participation in institutional quality assurance committees, such as root cause and just
culture
c. Analysis of complex cases with unexpected outcome discussed in a multispecialty
group involving hospital and nursing administration in addition to clinical services
d. Discussion about ‘near misses’ and sentinel events

Examples of tools that may be used to teach and assess systems based practice skills
include, but are not limited to:
1. Clinical conferences, including structured morbidity and mortality conference
2. Committee appointments
3. Didactic lectures
4. Multidisciplinary patient care rounds
5. Office practice participation
6. On-line learning modules (e.g. infection control, hand hygiene)
7. Patient survey
8. 360° global rating

GOALS

MEDICAL KNOWLEDGE
The goal of the Colon & Rectal Surgery Residency Training Program is to train safe, competent and confident surgeons who are experts in the practice of colon and rectal surgery and are committed to ongoing learning through study and assessment of their outcomes. The competency of Medical Knowledge is a large part of the curriculum, and is many areas is inextricably linked to Technical Skills, which while not one of the recognized six competencies, is sometimes considered the seventh competency for many procedural-based specialties.

OBJECTIVES
I. ANATOMY/EMBRYOLOGY OF SMALL BOWEL, COLON, RECTUM, ANUS, PELVIS, AND PELVIC FLOOR

Residents in colon and rectal surgery should be able to identify, describe, and discuss the significance of the following anatomic features:

1. Colon: anatomic features; anatomic relationship of colon segments; blood supply; lymphatic drainage; sympathetic and parasympathetic innervation
2. Small bowel: segments of the small bowel; origin and anatomy of vascular supply of small bowel segments; innervation
3. Rectum: anatomic relation of rectum to fascia, peritoneum, and nerves innervating other pelvic organs; anatomy/histology of rectal wall including valves of Houston; blood supply; lymphatic drainage; sympathetic and parasympathetic innervation
4. Anal canal: anatomic relations of anal canal; muscles and epithelium of anal canal, including transitional zone; anal glands; pudendal artery as blood supply to anal canal; lymphatic drainage of anal canal above and below dentate line; innervation of internal and external anal sphincters
5. Pelvis and pelvic floor: anatomy and blood supply of bony pelvis; blood supply and innervation of pelvic floor muscles; blood supply and innervation of external pelvic muscles; pathway of sciatic nerve

Residents in colon and rectal surgery should be able to identify, describe, and discuss the significance of the following embryologic areas:

1. Normal embryologic development of the small bowel, colon, rectum, anus, and pelvic floor; normal embryologic rotation of the small bowel, colon, and rectum.
2. Pathologic embryologic development of the small bowel, colon, and rectum, including abnormalities of rotation, proximal colon duplications, Meckel’s diverticulum, Hirschsprung’s disease
3. Embryologic anomalies associated with the rectum, anus, and pelvic floor, including imperforate anus, rectal duplication cysts, epidermoid cysts, developmental cysts, and teratoma
4. Normal embryologic development of the sacrum
5. Embryologic sacral anomalies, including sacral dysgenesis, spina bifida, and anterior sacral meningocele
II. NORMAL AND ABNORMAL PHYSIOLOGY OF COLON, RECTUM, ANUS, AND PELVIC FLOOR; PHYSIOLOGIC EVALUATION

Residents in colon and rectal surgery should be able to describe and discuss the normal physiologic functions of the colon, rectum, and anus, including:

1. Normal colonic absorption/secreton of water and electrolytes
2. Normal colonic metabolism of complex carbohydrates and proteins
3. Function of the proximal versus the distal colon in these processes
4. Normal colonic motility patterns, transit times, and myoregulation and neuroregulation processes
5. The process of normal defecation and the role of colonic fecal storage
6. The contribution of the rectum and anus to normal defecation (including rectal compliance and reservoir function, the role of the pressure receptors in the puborectalis and pelvic floor muscles, the rectoanal inhibitory reflex, the sampling reflex, and the role of the external and internal sphincters, the puborectalis and levator ani muscles)
7. The pharmacology of anal sphincter neurotransmitters
8. The contribution of different muscle fiber types to anal continence

Residents in colon and rectal surgery should be able to describe and discuss the presentation and etiologies of the following disturbances in colonic, rectal and anal function:

1. Constipation
2. Enterocoele and sigmoidocele
3. Colonic inertia
4. Megacolon
5. Colonic pseudo obstruction
6. Irritable bowel syndrome
7. Solitary rectal ulcer syndrome
8. Rectal prolapse
9. Symptomatic rectocele
10. Short segment Hirschsprung’s disease
11. Anismus
12. Fecal incontinence

Residents in colon and rectal surgery should be able to describe and discuss evaluation methods for colon, rectum and anal physiologic alterations (including required equipment, indications, techniques, and interpretation):

1. Endoscopy
2. Contrast study
3. Transit time study
4. Anorectal manometry
5. Electromyography and pudendal nerve testing
6. Dynamic defecography/dynamic MRI
7. Balloon expulsion
8. Pelvic floor exercise
9. Directed biofeedback
10. Endoanal ultrasonography

III. FECAL INCONTINENCE
Residents in colon and rectal surgery should be able to:

1. List the causes of fecal incontinence, with incidence, pathophysiology, and the characteristic anatomic, neurologic, dermatologic, and endoscopic findings associated with each cause.
2. Describe and discuss an algorithm to approach patients with fecal incontinence.
3. Describe the key components of a thorough history and physical examination of patient with fecal incontinence, including the clinical tools available to quantify fecal incontinence.
4. Order anorectal physiology tests and imaging studies as indicated by history and physical findings.
5. Describe the normal and abnormal findings of anorectal physiology tests and imaging studies that are used in the evaluation of incontinence.
6. Interpret anorectal physiology tests and imaging studies that are used in the evaluation of incontinence.
7. Describe and discuss non-operative strategies and surgical options in the management and treatment of fecal incontinence.
8. Describe and discuss the indications, contraindications, post-operative care, complications and functional results of fecal diversion, sphincter repair, sacral nerve stimulation, postanal repair, total pelvic floor repair, muscle transpositions, artificial bowel sphincter and encirclement procedures.

IV. CONSTIPATION AND PELVIC FLOOR DISORDERS

Residents in colon and rectal surgery should be able to describe and discuss:
1. The etiology and differential diagnosis of constipation, and define constipation using the Rome criteria.
2. The utility of contrast and magnetic resonance dynamic proctography, transit studies, anorectal manometry, electromyography (EMG) recruitment, balloon expulsion, contrast enema and endoscopy in the evaluation of chronic constipation.
3. The indications, contraindications, modes of action, complications, and classification of laxatives.
4. The etiology, appearance, and significance of melanosis coli.
5. Anismus, including diagnostic criteria and treatment.
7. Symptomatic rectocele, including clinical presentation and nonsurgical versus surgical treatment options.
8. Enterocoele and sigmoidocele, including clinical presentation, diagnostic criteria and surgical treatment options.
9. Isolated colonic and panenteric inertia.
10. Colonic pseudo-obstruction, including etiology, and management options with indications, contraindications, risks, and outcomes.
11. The Rome diagnostic criteria for irritable bowel syndrome (IBS).
12. Management options of IBS for constipation and diarrhea predominant IBS.

V. RECTAL PROLAPSE

Residents in colon and rectal surgery should be able to describe and discuss:
1. The epidemiology, pathophysiology, and anatomic findings of rectal prolapse and solitary rectal ulcer in adults and children.
2. The clinical presentation, endoscopic and histologic findings and associated pelvic floor disorders in patients with solitary rectal ulcer.
3. The significance of internal intussusceptions and the radiologic findings suggestive of it.
4. The clinical presentation, physical findings, functional disturbances and the office diagnostic maneuvers used to evaluate rectal prolapse
5. Physiologic, radiographic, and endoscopic evaluation of rectal prolapse as indicated by history and physical findings
6. The significance of constipation and incontinence in the management of rectal prolapse
7. Non-operative strategies for the management of rectal prolapse
8. The indications, contraindications, risks, post-operative care, complications, functional results, and recurrence rates of abdominal and perineal surgical options for rectal prolapse (including abdominal rectopexy with or without sigmoidectomy, Ripstein procedure, perineal rectosigmoidectomy, Delorme procedure and anal encirclement)
9. An algorithm to approach patients with rectal prolapse

VI. PELVIC PAIN

Residents in colon and rectal surgery should be able to describe and discuss:
1. The etiology, pathophysiology, diagnostic modalities, differential diagnosis and treatment strategies of chronic rectal pain syndromes, including levator syndrome, proctalgia fugax, coccydynia, and pudendal neuralgia, and their association with pelvic floor abnormalities

VII. ENDOSCOPY OF COLON, RECTUM, ANUS, AND POUCHES

Residents in colon and rectal surgery should be able to describe and discuss:
1. The indications, contraindications, limitations and potential complications (with their management) of anoscopy, rigid proctoscopy, flexible sigmoidoscopy, pouchoscopy, ileoscopy and colonoscopy
2. The preparation, positioning, and technique used for anoscopy, rigid proctoscopy, flexible sigmoidoscopy, pouchoscopy, ileoscopy and colonoscopy
3. The normal and abnormal findings encountered (including normal landmarks) in the course of anoscopy, rigid proctoscopy, flexible sigmoidoscopy, pouchoscopy, ileoscopy and colonoscopy, and their significance
4. The different types/sizes of anoscopes and rigid proctoscopes, and the indications for their use
5. The indications/contraindications, advantages/disadvantages of air versus carbon dioxide insufflation in flexible endoscopy
6. The indications/contraindications, advantages/disadvantages of rigid versus flexible pouchoscopy and ileoscopy
7. The technique, indications, contraindications and potential complications (including their management) of polypectomy, tattooing for localization, pneumatic dilation of colonic strictures, and stenting of colonic strictures
8. The techniques for endoscopic control of colonic bleeding and potential complications (including their management)
9. The indications for prophylactic antibiotic use for endoscopic procedures
10. The management of anticoagulants or antiplatelet agents in elective, urgent, and emergent endoscopic settings
11. The indications for use of conscious sedation, monitored anesthesia care with intravenous sedation, and general anesthesia for endoscopy
12. The drugs used for conscious sedation, including appropriate dosages, side effects, and reversal agents
13. The appropriate monitoring and discharge instructions for endoscopy performed under conscious sedation, monitored anesthesia care with intravenous sedation, or general
VIII. IMAGING, INCLUDING ENDORECTAL/ENDOANAL ULTRASOUND
Residents in colon and rectal surgery should be able to describe and discuss imaging modalities relevant to the practice of colorectal surgery, including:

The indications, technique, limitations, risks, and interpretation of plain films, barium enema, gastrograffin enema, small bowel contrast studies, fistulograms and sinograms, abdominal ultrasound and positron emission (PET) scan

The indications, technique, limitations, risks, and interpretation of standard computed tomography (CT) scanning (plain, or with oral, intravenous, and rectal contrast), CT enterography, and CT colonography

The indications, technique, limitations, risks, and interpretation of magnetic resonance imaging (MRI), including use of intravenous contrast and endorectal coil

The indications, technique, limitations, risks, and interpretation of tests used in the evaluation and management of lower GI bleeding, specifically angiography, technetium labeled RBC scan and Meckel's scan

The indications, technique, limitations, risks, and interpretation of dynamic proctography

The indications, technique, limitations, risks, and interpretation of tests used in the evaluation and management of deep vein thrombosis (DVT) and pulmonary embolism (PE), specifically venous duplex scan, ventilation/perfusion (V/Q) scan, chest CT scan, and pulmonary angiography

Residents in colon and rectal surgery should be able to describe and discuss:
1. The preparation for and the performance of endoanal (EAUS) and endorectal (ERUS) ultrasonography
2. Normal and abnormal anal and rectal ultrasonographic anatomy
3. The accuracy of ERUS in staging rectal cancer
4. The utility of ERUS in follow up after rectal cancer resection
5. The utility of EAUS in evaluation of fecal incontinence, perianal sepsis and fistula-in-ano, and anal canal neoplasms

IX. PREOPERATIVE RISK ASSESSMENT AND PREPARATION FOR SURGERY; POSTOPERATIVE CARE; COMPLICATIONS
Regarding patients facing major colorectal resection; residents in colon and rectal surgery should be able to describe and discuss the preoperative risk assessment and preparation, including:
1. The evaluation of risk for postoperative morbidity/mortality using Goldman or ASA classification
2. The need for specific preoperative organ system assessment, including cardiac, respiratory, renal, and metabolic/endocrine/nutritional assessment
3. Indications and advantages/disadvantages of complete mechanical bowel preparation versus enemas for low anastomosis for open and laparoscopic procedures
4. Prophylactic antibiotic usage, including antibiotic choices to decrease site specific infection, indications and antibiotic choices to prevent endocarditis and prosthetic anesethia
seeding, and risks vs. benefits of prophylactic antibiotics

5. Strategies for prevention of venous thromboembolism in low to moderate risk patients, high risk patients, and very high risk patients

6. Strategies to decrease postoperative ileus, including intraoperative fluid restriction, selective gastric drainage, early feeding, and pharmacologic agents

7. Preoperative planning for stoma placement, including consultation with enterostomal therapy. Residents in colon and rectal surgery should be able to describe and discuss the postoperative management of colorectal surgery patients, including:
   1. Postoperative pain control via the oral, intravenous and epidural route
   2. Perioperative fluid management
   3. DVT prophylaxis, including compression devices, low dose unfractionated or low molecular weight heparin
   4. Early postoperative feeding

Residents in colon and rectal surgery should be able to describe and discuss appropriate evaluation and management of common colorectal postoperative complications, including:

1. Infectious complications, including abdominal or perineal wound infection, intraabdominal or pelvic abscess, anastomotic leaks
2. Clostridium difficile colitis
3. Genito urinary complications, including injury to ureter, bladder, or urethra; sexual and urinary dysfunction; and female infertility and trapped ovary syndrome
4. Additional intestinal complications, including adhesive obstruction, prolonged ileus, enteric fistula, and stomal complications
5. Deep venous thrombosis and pulmonary embolism
6. Postoperative bleeding

X. HEMORRHOIDS
Residents in colon and rectal surgery should be able to describe and discuss:

1. Proposed etiologies of internal and external hemorrhoids
2. Anatomic distinction between internal and external hemorrhoids
3. Classification of internal hemorrhoids
4. Medical management and non-surgical options for hemorrhoid disease, with the indications, risks, and limitations of each option
5. Surgical management of hemorrhoid disease, including indications, limitations, and complications

XI. ANAL FISSURE
Residents in colon and rectal surgery should be able to describe and discuss:

1. The etiology, signs and symptoms of anal fissure
2. The anatomic location of a classic anal fissure
3. The significance of hypertonic vs. hypotonic internal sphincter in planning the management of anal fissure
4. Indications, contraindications, limitations and complications of non-operative management of fissures
5. Indications, contraindications, and complications of lateral internal sphincterotomy, anoplasty, fissurectomy and anal dilatation

XII. ABSCESS AND FISTULA, INCLUDING
RECTOVAGINAL/RECTOURETHRAL FISTULA

Residents in colon and rectal surgery should be able to describe and discuss:
1. The cryptoglandular origin of anorectal abscess/fistula
2. How to differentiate cryptoglandular abscess/fistula from fistula due to other causes
3. The classification of cryptoglandular perianal/perirectal abscess/fistula based on anatomic spaces
4. Park’s classification system of anal fistula
5. Horseshoe abscess/fistula
6. The natural history of surgically treated perianal/perirectal abscess
7. The operative management of abscess/fistula disease, including complications
8. The etiology, classification, preoperative evaluation and treatment of rectovaginal fistulas based on location and etiology, and the results of surgical repair
9. The evaluation and treatment of rectourethral fistulas, and the results of surgical repair

XIII. BENIGN ANAL MISC; BENIGN DISEASES OF SKIN APPENDAGES
Regarding each of the following conditions, residents in colon and rectal surgery should be able to describe and discuss:

A. Anal Stenosis
   1. The etiologies of anal stenosis
   2. The surgical and non-surgical management of anal stenosis, including indications, risks, and benefits

B. Pruritis Ani and Dermatologic Conditions
   1. The clinical presentation, etiology, and management of pruritus ani, including indications for skin biopsy
   2. The clinical presentation, etiology, and management of perianal dermatologic complaints, including psoriasis, eczema, shingles, herpes, and contact dermatitis

C. Sexually Transmitted Infections
   1. The etiology and colon and rectal manifestations of the most common bacterial and viral sexually transmitted infections
   2. The medical treatment of the most common bacterial and viral sexually transmitted infections which affect the anorectum
   3. The etiology and diagnosis of condylomata acuminata
   4. The influence of human papilloma virus serotypes on subsequent cancer development
   5. The technique, limitations, pros and cons of anal cytology in the diagnosis and management of anal intraepithelial dysplasia

D. Hidradenitis Suppurativa
   1. The pathophysiology, signs/symptoms, and medical and surgical management of hidradenitis suppurativa
   2. Options for surgical management of hidradenitis suppurative, including risks and benefits

E. Pilonidal disease
   1. The pathophysiology and signs/symptoms of pilonidal disease
   2. Options for surgical management of pilonidal disease, including risks and benefits

XIV. COLONIC DIVERTICULAR DISEASE
Residents in colon and rectal surgery should be able to describe and discuss:

1. The proposed etiologies, incidence and epidemiology of colonic diverticular disease
2. The spectrum of presentation of uncomplicated and complicated colonic diverticular disease, including symptoms, physical findings and diagnostic test findings
3. The signs, symptoms and diagnostic findings for uncommon presentations of colonic diverticular disease
4. The rationale and indications for medical and/or surgical management of diverticular disease and its complications

XV. HEMATOCEHizia AND VASCULAR MALFORMATIONS
Residents in colon and rectal surgery should be able to:
1. List the etiologies of hematochezia
2. Compare and contrast the utility, specificity and sensitivity of colonoscopy, angiography, and nuclear scans in the evaluation of lower GI bleeding
3. Discuss the evaluation of chronic recurrent lower GI bleeding, including the use of capsule enteroscopy, double-balloon enteroscopy, exploratory laparotomy with intraoperative endoscopy, and provocative angiography
4. Discuss etiologies of angiodysplasia
5. Discuss the classification of hemangiomas, their clinical presentation and predominant GI sites

XVI. BENIGN COLON MISC.

Regarding each of the following conditions, residents in colon and rectal surgery should be able to describe and discuss:

A. Volvulus
1. Proposed etiologies, incidence, and epidemiology of volvulus of the colon
2. The clinical presentation and diagnosis of colonic volvulus
3. Rationale and indications for nonoperative and operative management options for colonic volvulus

B. Endometriosis involving the colon and/or rectum
1. The etiology of endometriosis involvement of the colon or rectum
2. The clinical presentation and endoscopic and laparoscopic findings of endometriosis
3. The indications for medical management of endometriosis involving the colon or rectum
4. Indications for operative management of endometriosis involving the colon or rectum

XVII. COLON, RECTAL, AND ANAL TRAUMA
Residents in colon and rectal surgery should be able to:
1. Compare and contrast the utility of imaging and diagnostic tests in the evaluation of blunt colonic abdominal trauma
2. Compare and contrast the utility of different methods of evaluating penetrating colonic abdominal trauma
3. Describe and discuss the management options of colorectal trauma, including their indications, risks and benefits in selected colonic trauma scenarios
4. Identify clinical situations requiring evaluation for possible rectal trauma
5. Describe and discuss methods for the diagnosis of rectal trauma and associated injuries
6. Describe and discuss issues in the surgical management of rectal trauma including
7. Describe and discuss the evaluation and treatment of third and fourth degree obstetrical injuries
8. Describe and discuss the evaluation and treatment of traumatic anal injuries including the role of primary repair, delayed repair and fecal diversion

XVIII. POLYPS AND POLYPOSIS SYNDROMES
Residents in colon and rectal surgery should be able to describe and discuss:
1. The epidemiology, incidence and prevalence, and potential etiologic factors of colorectal adenomas
2. The molecular pathways of the adenoma carcinoma sequence, and the serrated adenoma pathway to carcinoma
3. The gross and microscopic features of hyperplastic, inflammatory and adenomatous, and hamartomatous polyps
4. The potential for missed polyps during colonoscopy; techniques used to reduce miss rates, including high resolution endoscopy and chromoendoscopy
5. The criteria used to recommend formal oncologic bowel resection for malignant polyps, including Haggitt’s classification of polyps, the risk of lymph node metastasis, and the depth of submucosal invasion
6. Familial adenomatous polyposis (FAP), including clinical features, extracolonic manifestations, genetic features, the role and usefulness of genetic testing in FAP, the modalities and role of screening in FAP families and surveillance in FAP
7. Clinical variants of FAP, including attenuated FAP, Gardner’s syndrome, and Turcot’s syndrome
8. MYH-associated polyposis (MAP), including clinical features, extracolonic manifestations, genetic features, the role and usefulness of genetic testing, and the modalities and role of screening and surveillance in MAP families

XIX. EPIDEMIOLOGY AND ETIOLOGY OF COLORECTAL CANCER
Residents in colon and rectal surgery should be able to describe and discuss:
1. The epidemiology, incidence and prevalence of sporadic colorectal cancer; associated socioeconomic factors; ethnic, gender, age, and geographic variations; and anatomical distribution of cancers within the colon
2. The etiology of colorectal cancer, including occupational/environmental risk factors including obesity, smoking, physical activity, and dietary considerations including fiber, calcium, folate, red meat
3. Factors associated with elevated risk for colorectal cancer, including inflammatory bowel disease, personal and family history of colon cancer and cancer syndromes, inherited susceptibility to colorectal cancer, and cholecystectomy
4. The molecular pathways leading to carcinogenesis, including specific genes involved in the development of cancer
5. Appropriate screening modalities and relative efficacy of each screening modality for usual-risk patients as well as patients with a personal history of colorectal cancer or polyps and for familial adenomatous polyposis (FAP), MYH-associated polyposis (MAP), hereditary non polyposis colorectal cancer (HNPCC), and inflammatory bowel
disease
6. De novo carcinoma
7. Colorectal cancer prevention, including aspirin and NSAIDS
8. Specific genes involved in hereditary non-polyposis colorectal cancer (HNPCC) and genotype-phenotype relationships; genetic testing for HNPCC, including immunohistochemistry (IHC) analysis, microsatellite instability (MSI) testing and germline testing
9. The Amsterdam criteria and the modified Bethesda criteria for clinical diagnosis of HNPCC
10. The clinical features of HNPCC, including common extracolonic tumors; the pathologic features of HNPCC
11. Surgical management of HNPCC, including treatment options (indications, contraindications and limitations); prognosis after resection
12. Chemoprevention options in HNPCC
13. Familial colorectal cancer type X

XX. COLORECTAL CANCER DIAGNOSIS, STAGING, AND PROGNOSIS
Residents in colon and rectal surgery should be able to describe and discuss:
1. Signs and symptoms of colon cancer and rectal cancer, including location specific symptoms (right colon, left colon, rectum)
2. The clinical evaluation and the localization of lesions in the colon and rectum
3. The clinical staging of colorectal cancer, including imaging studies and serum markers; staging following neoadjuvant therapy (including post-treatment imaging and serum markers); and pathologic staging, including the associated prognosis
4. The indications, limitations and usefulness of CT scan, MRI, endorectal ultrasound and PET scan in preoperative staging of colon cancer and rectal cancer
5. The use of carcinoembryonic antigen (CEA) in the staging and management of colorectal cancer
6. Mechanisms and patterns of metastases in colorectal cancer
7. The pathologic features and the impact of histologic grade, microsatellite instability, mucinous histology, signet cell histology, venous invasion, lymphatic invasion, perineural invasion and lymph node involvement on colorectal cancer prognosis
8. The significance of proximal, distal, and radial margins in the prognosis of colorectal cancer

XXI. SURGICAL MANAGEMENT OF INTRAPERITONEAL COLON CANCER
Residents in colon and rectal surgery should be able to describe and discuss:
1. Preparation of the patient for colon resection for cancer
2. The key surgical aspects of oncologic colon procedures, including right hemicolectomy, extended right hemicolectomy, left colectomy, sigmoid colectomy, and total abdominal colectomy
3. The role of minimally invasive techniques in the surgical management of colon cancer
4. The prognosis for colon cancer based on intra-operative and histopathologic findings
5. The role of prophylactic oophorectomy
6. The surgical management of acute obstructive colon cancer, perforated colon cancer, synchronous colon cancer and unsuspected metastatic disease

XXII. SURGICAL MANAGEMENT OF RECTAL CANCER
Residents in colon and rectal surgery should be able to describe and discuss:

1. The role of a multidisciplinary approach in the evaluation and management of rectal cancer
2. Multimodality treatment for rectal cancer, including indications, limitations, risks and outcomes of neoadjuvant therapy for unfavorable rectal cancer; indications, limitations, risks and outcomes of adjuvant therapy
3. The prognostic significance of complete and near-complete pathologic response to neoadjuvant therapy, and its impact on management
4. Preparation of the patient for rectal cancer resection
5. The surgical treatment options for rectal cancer, including local excision, transanal microsurgery (TEMS) and total mesorectal excision, demonstrating knowledge of the techniques, indications, limitations, risks and outcomes
6. The role of minimally invasive techniques, including robotics, in the surgical management of rectal cancer
7. The indications, contraindications, and technique of sphincter preservation surgery, colonic J pouch or coloplasty, and intersphincteric dissection
8. The outcome of surgery and the long-term prognosis of rectal cancer based on intra-operative and histopathologic findings

XXIII. ADJUVANT THERAPY AND SURVEILLANCE FOR COLON AND RECTAL CANCER
Residents in colon and rectal surgery should be able to describe and discuss:

1. The indications, agents, and schedule of adjuvant chemotherapy for node-positive (Stage III) colon and rectal cancer
2. The role of adjuvant chemotherapy in node-negative (Stage II) colon and rectal cancer
3. The role of adjuvant radiotherapy in the treatment of colon and rectal cancer
4. The tests used for surveillance of recurrence after an initial diagnosis of cancer
5. The recommended schedule for surveillance colonoscopy after an initial cancer diagnosis
6. The risks, patterns and timing of recurrent cancer after an initial cancer diagnosis
7. The incidence of metachronous polyps and cancer after an initial cancer diagnosis

XXIV. MANAGEMENT OF LOCALLY ADVANCED, METASTATIC, AND RECURRENT COLORECTAL CANCER
Residents in colon and rectal surgery should be able to describe and discuss:

1. Clinical symptoms and imaging and intraoperative findings suggestive of unresectability
2. The role of multi-modality therapy in the treatment of colorectal cancer unresectable at presentation, including surgery, radiation therapy (intra-operative and external beam), and chemotherapy
3. Indications, contraindications, limitations and technique of endoscopic stenting and laser ablation or recanalization
4. Palliative management of the primary cancer and metastatic disease, including options to treat/palliate metastases to the liver, peritoneum, ovary, lungs, bone and brain
5. The role of a multidisciplinary approach in the evaluation and management of metastatic disease and palliative approaches

XXV. LESS COMMON MALIGNANT LESIONS OF THE COLON AND RECTUM
Residents in colon and rectal surgery should be able to describe and discuss the clinical presentation, management and prognosis of the following colorectal pathologies:

1. Carcinoid
2. Lymphoma
3. GIST
4. Leiomyoma and leiomyosarcoma
5. Squamous and adenosquamous carcinoma
6. Plasmacytoma
7. Melanoma
8. Leukemic infiltration

XXVI. ANAL AND PERIANAL NEOPLASIA
Residents in colon and rectal surgery should be able to describe and discuss:
1. The distinction between the anal canal, the anal margin and the perianal skin, including the lymphatic drainage patterns and associated implications for management of neoplasms in the region
2. The histology of the anal canal, with the significance of the anal transitional zone
3. The epidemiology and etiology of anal neoplasia, including demographics, changing incidence, association with sexual practices, and high-risk groups
4. The staging of anal neoplasia including AIN and TNM staging
5. The histology, biology, and treatment of anal canal malignancies, including epidermoid carcinoma, adenocarcinoma, small cell carcinoma, and melanoma
6. The treatment of recurrent or residual anal canal cancer
7. The histology, biology, and treatment of anal margin malignancies, including squamous cell carcinoma, basal cell carcinoma, intraepithelial squamous cell carcinoma (Bowen’s disease), intraepithelial adenocarcinoma (Paget’s disease), giant verrucous tumor (Buschke-Lowenstein), and HIV-related cancers (Kaposi’s sarcoma, lymphoma)
8. Role of HPV vaccine in prevention of anal neoplasia

XXVII. PRESACRAL TUMORS
Residents in colon and rectal surgery should be able to describe and discuss:
1. The anatomy, physiology and clinical presentation of presacral tumors
2. The differential diagnosis and classification of presacral tumors
3. The gross and histologic appearance of presacral tumors
4. A decision-making algorithm for the diagnosis and management of presacral tumors, including the role and usefulness of pre-operative imaging, pre-operative biopsy, and neoadjuvant therapy
5. The surgical management of presacral tumors, including the various approaches with their indications and technique
6. The prognosis and post-operative outcome for presacral tumors

XXVIII. INFLAMMATORY BOWEL DISEASE ETIOLOGY, CLASSIFICATION, PRESENTATION, FINDINGS

Residents in colon and rectal surgery should be able to describe and discuss:
1. Presenting symptoms, physical findings, clinical patterns and natural history of Crohn’s disease (CD), ulcerative colitis (UC), unclassified inflammatory bowel disease (IBDU), and indeterminate colitis (IC)
2. Extraintestinal manifestations of IBD, including hepatic, bone and joint, dermatologic, ophthalmologic and hypercoagulability
3. The etiology of IBD, including the possible role of genetics, immune function, infectious
agents, psychological issues, and environmental factors
4. The comparable and contrasting epidemiologic features of Crohn’s disease and ulcerative colitis including age and gender distribution, prevalence, risk, and ethnic and geographic variations
5. The criteria for severity of disease as defined by the Crohn’s disease activity index (CDAI) and the Truelove classification for ulcerative colitis; the Vienna and Montreal classifications of Crohn’s disease and ulcerative colitis
6. The endoscopic and radiographic findings, distinguishing histologic characteristics and serologic markers in ulcerative colitis, Crohn’s disease, IBDU, and IC
7. The differential diagnosis of diseases mimicking IBD
8. The impact of IBD on fertility and pregnancy outcome; and the impact of pregnancy on the course of IBD

XXIX. MEDICAL MANAGEMENT OF INFLAMMATORY BOWEL DISEASE
Residents in colon and rectal surgery should be able to discuss:
1. Mechanism of action, indication, dosage, side effects, and toxicity of drugs used for the treatment of Crohn’s disease and ulcerative colitis, including aminosalicylates, corticosteroids, antibiotics, immunomodulatory drugs, and biologics
2. The initial site-specific medical management
3. The role of nutritional support
4. Approaches for induction of remission and maintenance of remission
5. Medical management of perianal Crohn’s disease
6. The use of postoperative medical prophylactic therapy in Crohn’s disease
7. Risk of small and large bowel carcinoma with regard to extent and duration of disease
8. Cancer surveillance recommendations, including technique, limitations, interpretation of biopsy results, and the significance of dysplasia (low versus high grade) and concomitant inflammation

XXX. SURGICAL MANAGEMENT OF ULCERATIVE COLITIS
Residents in colon and rectal surgery should be able to describe and discuss:
1. Indications for surgery, comparing and contrasting elective strategies for chronic ulcerative colitis with urgent/emergent strategies for acute or fulminant colitis
2. Indications, contraindications, risks, limitations, operative technique and complications of total proctocolectomy with pelvic pouch (including S, J, W, or lateral isoperistaltic), with continent ileostomy, or with end ileostomy; or total abdominal colectomy with ileorectal anastomosis
3. Specifics of ileoanal pouch construction, including double stapled versus hand sewn anastomosis, shape and size of the ileal pouch, and intraoperative techniques used to obtain a tension-free pouch anal anastomosis
4. Indications, risks, and benefits for temporary diverting ileostomy proximal to an ileoanal pouch; and the role of a 2 stage versus 3 stage approach
5. Consideration of ileoanal pouches in the setting of colorectal cancer, in patients with IBDU and IC, and in the elderly

XXXI. SURGICAL MANAGEMENT OF CROHN’S DISEASE
Residents in colon and rectal surgery should be able to describe and discuss:
1. The indications for surgery for Crohn’s disease, comparing and contrasting elective, urgent and emergency operative strategies
2. The indications, contraindications, risks, limitations, operative technique and complications of segmental resection with or without anastomosis, strictureplasty, fecal diversion, and intestinal bypass
3. The management of complicated abdominal Crohn’s disease, including interloop, intermesenteric, and iliopsoas abscess; enterocutaneous, enterenteric, and colovaginal fistula; and Crohn’s disease of the duodenum and proximal GI tract
4. Management of anorectal Crohn’s disease, including abscess, anal fissure and ulcer, perianal/perirectal fistula, and rectovaginal and anovaginal fistula, skin tags

XXXII. MANAGEMENT OF LESS COMMON BENIGN COLORECTAL DISORDERS
Residents in colon and rectal surgery should be able to describe and discuss:

The etiology, pathogenesis, clinical presentation, diagnostic evaluation and medical and surgical management of acute and chronic colonic ischemia
Risk factors, mechanism of injury, gross and microscopic findings, and medical and surgical management of acute and chronic radiation injury
The clinical presentation and management of microscopic/collagenous colitis, eosinophilic colitis, and lymphocytic colitis
The clinical presentation and management of collagen-associated colitides, including polyarteritis nodosa, cryoglobulinemia, Henoch-Schönlein purpura, Behçet’s syndrome, systemic lupus erythematosus, scleroderma, and polymyositis
The clinical presentation and management of miscellaneous colitides, including diversion colitis, neutropenic enterocolitis, disinfectant colitis, corrosive colitis, NSAID-induced colitis, and toxic epidermal necrolysis
The etiology, epidemiology, pathogenesis, and medical and surgical treatment of infectious colitides, including Clostridium difficile colitis, bacterial, viral, colitis, and parasitic colitis
The etiology, epidemiology, pathogenesis, and medical treatment of diarrhea in the HIV patient

XXXIII. STOMAS AND THE COMPLICATIONS THEREOF
Residents in colon and rectal surgery should be able to describe and discuss:
1. The indications and contraindication for temporary and permanent colostomy, temporary and permanent ileostomy, and continent ileostomy
2. The techniques for stoma creation, including end colostomy, end ileostomy, Brooke ileostomy, loop stoma, loop-end stoma, and continent ileostomy; and the use of extraperitoneal tunneling
3. Normal ileostomy, colostomy and urostomy function and physiology, and their corresponding pathologies
4. The diagnosis and medical/surgical management of stoma related complications, including herniation, stenosis, prolapse, ischemia, retraction, bolus obstruction, bowel obstruction, hemorrhage associated with portal hypertension, stomal varices, high output, skin irritation/leakage, and skin infections

XXXIV. LAPAROSCOPIC COLORECTAL SURGERY TECHNIQUE
Residents in colon and rectal surgery should be able to describe and discuss:

1. The advantages and disadvantages, indications and contraindications of laparoscopic management of benign and malignant colon and rectal diseases, including the physiologic impact of pneumoperitoneum on cardiovascular, respiratory, and immunologic function; and the learning curve in laparoscopic colorectal surgery
2. Equipment, operating room set up, patient positioning, and instrumentation for the performance of a laparoscopic colorectal procedures
3. Outcomes of laparoscopy in surgery for colon and rectal cancer, diverticular disease, rectal prolapse surgery, Crohn’s disease and ulcerative colitis
4. Factors that influence the decision for conversion from laparoscopic to open procedure

XXXV. PEDIATRIC COLORECTAL DISEASE
Residents in colon and rectal surgery should be able to describe and discuss:

1. The incidence, etiology, histology, varying anatomic extent, associated congenital anomalies and differential diagnosis of pediatric Hirschsprung’s disease
2. Ultrashort segment Hirschsprung’s disease and total colonic aganglionosis
3. Indications, technique, limitations and outcomes of operative options in the management of pediatric Hirschsprung’s disease
4. The incidence, etiology, and classification of imperforate anus, including specific anatomical defects in male and female infants, and associated anatomic abnormalities
5. Diagnostic tests, initial and definitive treatment strategies, surgical options and long term outcome of operative repairs of imperforate anus and its various presentations
6. Frequent pediatric colon and rectal conditions, including constipation/encopresis, rectal prolapse, anal fissure, Meckel’s diverticulum, juvenile polyps and juvenile polyposis, necrotizing enterocolitis (NEC), gut malrotation, and sexual abuse

GOALS

TECHNICAL SKILLS
The specialty of Colon and Rectal Surgery encompasses a sizable technical component. It is therefore paramount that residents in Colon and Rectal Surgery demonstrate the ability to competently, safely and independently perform all essential surgical procedures indicated in the management of colon and rectal diseases. Initiatives are currently underway to improve teaching and assessment of technical competency skills. This is an evolving process; outcomes will be provided as they become available

OBJECTIVES
The American Board of Colon and Rectal Surgery currently includes the following procedures for technical competency:

Anorectal procedures:
1. Hemorrhoidectomy
2. Fistulotomy
3. Endorectal advancement flap
4. Sphincteroplasty
5. Internal sphincterotomy

Abdominal procedures:
1. Strictureplasty
2. Segmental colectomy (including ileocolic resection)
3. Laparoscopic colon resection
4. Low anterior resection (straight anastomosis and colon pouch or coloplasty)
5. Abdominoperineal resection
6. Pelvic dissection for cancer
7. Transanal excision of rectal lesion
8. Proctocolectomy with ileostomy
9. Proctocolectomy with ileoanal reservoir (handsewn and stapled anastomosis)
10. Rectal prolapse repair (abdominal and perineal approach)
11. Stoma creation
12. Stoma complication repair (parastomal hernia, stenosis, retraction, prolapse, fistula)

Endoscopy and pelvic floor procedures:
1. Proctoscopy
2. Anoscopy
3. Colonoscopy (diagnostic and with polypectomy)
4. Endorectal and endoanal ultrasound
5. Pelvic floor evaluation

The essential procedures from ACGME Program Requirements for Graduate Medical Education in Colon and Rectal Surgery effective July 2011 include: Anorectal and perineal procedures:
1. Anoplasty
2. Fistulotomy, including primary and staged advancement flap repairs of complex anorectal and rectovaginal fistulas
3. Hemorrhoidectomy, including operative and office treatment
4. Internal sphincterotomy
5. Perineal repair of rectal prolapse
6. Transanal excision of rectal neoplasms
7. Surgical treatment of hidradenitis
8. Surgical treatment of pilonidal disease

Abdominal procedures:
1. Abdominoperineal resection and total proctocolectomy
2. Creation of stomas and surgical management of stoma complications
3. Ileal pouch-anal anastomosis
4. Laparoscopic abdominal and gastrointestinal surgery, including colon and rectal resections, ostomy construction and prolapse repair
5. Low anterior resection with colorectal and coloanal anastomosis
6. Procedures for rectal prolapse
7. Segmental colectomy, including ileocolic resection and colon resection
8. Small bowel resection
9. Strictureplasty

Endoscopic procedures:
1. Anoscopy
2. Colonoscopy, including diagnostic and therapeutic
3. Proctosigmoidoscopy, including rigid and flexible Administration of conscious sedation and local analgesia

Pelvic floor procedures, including interpretation of clinical and laboratory study results to include:
1. Anorectal manometry
2. Anorectal ultrasound/pelvic
3. Magnetic resonance imaging (MRI) defecography
4. Transit time studies

Examples of tools that may be used to assess technical skills include, but are not limited to:
1. Direct observation of the resident performing a wide variety of abdominal, anorectal and
endoscopic procedures either as the surgeon or as the first assistant. All procedures are performed under the direct supervision of an attending physician who ensures that the resident is functioning in a skillful and safe manner. Patient safety is paramount at all times. Structured feedback is critical to ensure further development of skills and the use of procedure specific checklists and global rating forms is encouraged.

2. Operative simulation - various modules exist for training of specific core and advanced procedures and can be utilized in an animate experience. Engaged faculty to provide timely feedback and direction is critical in the development and improvement of technical skills using simulation.

3. Surgical lab experience Much work has been done in the development of performance assessment in using training models and whether skills and tasks taught in laboratory environments can translate into the clinical setting. However, evaluating performance in the operating room remains in evolution, and most efforts have focused on techniques that standardize the assessment process outside the operating room. Current and evolving assessment tools are based on direct observation and video recordings of performance of a particular simulated task or procedure and include the use of task specific checklists and rating scales, such as the Objective Structured Assessment of Technical Skills (OSATS) developed at the University of Toronto and the Southern Illinois University (SIU) Verification of Proficiency. The first component of OSATS is a task specific checklist consisting of specific surgical maneuvers that are considered essential elements of the procedure. The second is a global rating form, which includes a number of surgical behaviors, such as respect for tissues, economy of motion, and appropriate use of assistants. The attending surgeons and instructors are trained on the use of the assessment tools and are anchored on the assessment criteria to ensure and optimize inter-rater reliability. There are currently assessment forms available online for certain colorectal procedures that were developed in conjunction and based on the principles developed by the American College of Surgeons in collaboration with the Association of Program Directors in Surgery, Southern Illinois University (SIU) Surgical Skills Laboratory, and the Intercollegiate Surgical Curriculum Programme (London).

4. Video recordings of procedures – most advanced endoscopic and laparoscopic systems allow for the recording of the procedure. Utilization of video as a means of providing feedback on critical components of the procedure, technical maneuvers, and the ability to discuss ways for improvement has been shown to be beneficial in providing feedback on the development of technical skills. Utilization of video has been shown to be valid in providing feedback and as a measure of assessing progress in training.

5. Training courses in specific procedures, for example robotics, laparoscopy and Transanal Endoscopic Microsurgery can be utilized in the development and refinement of technical skills. Many course are available to residents at no or reduced charge through the program directors association or at the ASCRS annual meeting.
