Interprofessional Simulation Facilitator Training

Welcome to The STAR Center. Our team of simulation specialist, educators, and research experts are here to mentor, guide and assist you on your journey through simulation.

Below is a comprehensive list of courses offered at The STAR Center. We can customize any of these courses to meet the unique learning needs of your interprofessional teams.

Our STAR team is dedicated to assisting you to embed simulation education into your practice to enhance patient safety and provide the highest quality of safe, efficient and timely care to our patients, families, and community.
Theoretical Framework for Development of Simulation Courses

**Benner’s Novice to Expert**

This novice to expert theoretical framework provides the structure to guide simulation facilitators in the acquisition of knowledge and skills for all learners. The framework specifies 5 stages of development with defined parameters that a learner must display in order to be deemed a competent expert. This allows for standardization of simulation education throughout Allegheny Health Network ensuring the highest quality of simulation based education is delivered to our learners and thus to the care of our patients.

<table>
<thead>
<tr>
<th>Knowledge</th>
<th>Standard of work</th>
<th>Autonomy</th>
<th>Coping with complexity</th>
<th>Understanding complexity</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>EXPERT</strong></td>
<td>Authoritative knowledge of discipline, and deep tacit understanding across area of practice.</td>
<td>Excellence achieved with relative ease.</td>
<td>Able to take responsibility for going beyond existing standards and creating own interpretations.</td>
<td>Holistic grasp of complex situations, moves between intuitive and analytical approaches with ease.</td>
</tr>
<tr>
<td><strong>PROFICIENT</strong></td>
<td>Deep understanding in discipline and area of practice.</td>
<td>Fully acceptable standard achieved routinely.</td>
<td>Able to take full responsibility for own work, and of appropriate others.</td>
<td>Deals holistically, more confident decision-making.</td>
</tr>
<tr>
<td><strong>COMPETENT</strong></td>
<td>Good background and working knowledge in practice.</td>
<td>Fit for purpose, though may lack refinement.</td>
<td>Able to achieve most tasks using own judgement.</td>
<td>Copes using deliberate analysis and planning.</td>
</tr>
<tr>
<td><strong>BEGINNER</strong></td>
<td>Working knowledge of key concepts in practice.</td>
<td>Straightforward tasks likely to be completed in an acceptable manner.</td>
<td>Can achieve some steps using own judgement, needs supervision for overall task.</td>
<td>Appreciates complex situations, but can only partially address.</td>
</tr>
<tr>
<td><strong>NOVICE</strong></td>
<td>Rote knowledge not connected to practice.</td>
<td>Unlikely to be satisfactory unless closely supervised.</td>
<td>Needs close supervision, rules, and instruction.</td>
<td>Little or no concept, can’t deal with complexity.</td>

INTRODUCTION to Train the Trainer:

The STAR Center uses the Train the Trainer Model as a method to introduce all educators to simulation. Train the trainer, as explained by Orfaly et al (2005), is an educational model where potential trainers are targeted for training. These potential trainers are provided with education, instructional tools, and programmatic guidelines that enable them to, in turn, provide specific training to targeted audiences.

This model allows the instructor to impact their theoretical and clinical knowledge in the field of simulation to potential trainers. The Train the Trainer Model allows STAR Team members to evaluate and deem trainers competent in simulation and they can in turn train other members of their department to assist in simulation teaching.

Malcom Knowles—Theory of Adult Learning

This course utilizes Malcolm Knowles’ (1984) Theory of Adult Learning, “the art and science of helping adults learn.” This theory is based on five principles:

1. Self-Concept: As a person matures, he or she moves from dependency to self-directness.
2. Experience: Adults draw upon their experiences to aid their learning.
3. Readiness: The learning readiness of adults is closely related to the assumption of new social roles.
4. Orientation: As a person learns new knowledge, he or she wants to apply it immediately in problem solving.
5. Motivation (later added): As a person assumes, he or she receives their motivation to learn from internal factors.

Best Practice Standards:
These courses follows the standards of the International Nursing Association for Clinical Simulation and Learning (INACSL)

These standards are the foundation for simulation programs as best practice and evidenced based guidelines for implementation and training

These standards are based on the following areas:

- Simulation Design
- Outcomes and Objectives
- Facilitation
- Debriefing
- Participant Evaluation
- Professional Integrity
- Simulation-Enhanced Interprofessional Education (Sim-IPE)
- Simulation Operations (SimOps) - published 2017

These can be accessed at https://www.inacsl.org/inacsl-standards-of-best-practice-simulation/
The Courses
Airway Management for Advanced Practice Practitioners       AP

Course Overview

This course is to provide advanced practice practitioners and respiratory therapists the critical skills necessary to provide effective airway management. The skills reviewed will be how to perform successful bag mask ventilation, establish an advanced airway, and manage difficult airways in the healthcare environment. Learners will have the opportunity to review airway anatomy, formulate airway management plans, and practice non-invasive/invasive airway skills. Skills to be performed include mask ventilation, video and direct laryngoscopy, laryngeal mask airway (LMA) placement, use of the bougie device, along with other airway adjuncts.

Learning Outcomes

1. Identify the challenging patient airway.
2. Demonstrate the algorithmic approach to airway management.
3. Display simulation proficiency with multiple airway management techniques.
4. Describe effective communication with Interprofessional team during emergent airway management.

Instructional Methods: Oral Presentation, Simulation

Learners: AP- Advanced Practice Practitioners

SB 2/16/2021

JV 2/17/2021
Anesthesia Med Safety     AP

Course Overview

The perioperative environment is one of the most medication-intensive locations in a hospital with more medications, especially high-alert medications, administered per patient than in any other patient care area. However, due to the unique environment, perioperative locations may have fewer medication safety strategies in place than many other patient care areas.

Anesthesia providers have long been pioneers in patient safety. Despite remarkable efforts, anesthesia errors still occur, resulting in complications, injuries, and even death. The objective of this course is to review three cases of actual errors and understand the importance of medication safety in anesthesia.

Learning Outcomes

1. Determine the errors in actual cases and determine the corrective action.
2. Identify the basic rights of medication administration.
3. Determine the strategies for anesthesia to ensure safe medication administration.

Instructional Methods: Online Education Module

Learners: AP-Advanced Practice Practitioners

SB 03/30/2023

Top of document
Emergent Management of Atrial Tachycardia

Course Overview

This simulation oriented will review the identification and management of atrial tachycardia. Skills will include physical assessment of the tachycardic patient, identification of atrial tachycardia on the electrocardiogram, administration and titration of medications including diltiazem and amiodarone, and assessment of the response to therapy.

Learning Outcomes

1. Identify the patient with narrow complex tachycardia.
2. Demonstrate assessment of the tachycardic patient, identifying abnormalities.
3. Administer diltiazem and amiodarone therapy to manage atrial tachycardia.
4. Demonstrate effective nurse-to-physician communication to facilitate emergent orders.

Instructional Methods: Simulation

Learners: C – clinical staff members (ex: NA, LPN, RN, NP, PA, Physician)

mjm 3/30/23

Top of the Document
Blood Administration Training  R

Course Overview

This course is to provide hands on training for the proper technique, method and documentation for blood administration according to policy. Learners will be provided education to identify and properly manage a transfusion reaction.

Learning Outcomes

1. Demonstrate the correct steps in the blood administration procedure.
2. Recognize and properly manage a blood transfusion reaction.

Instructional Methods: Oral Presentation, Simulation/Return Demonstration

Learners: R- Registered Nurses (RN) Only

JV 1/4/2021
SB 1/5/2021

Top of the Document
Brain Injury Simulation  C

Course Overview

This course is designed to assist the healthcare provider in management of the brain injured patient. Through the use of standardized patients, a scenario is presented to challenge the provider in managing the behavioral changes that occur due to a brain injury. It is through an interactive approach that the learner can demonstrate essential skills to manage a patient having an uncontrolled outburst due to a brain injury.

Learning Outcomes

1. Identify uncontrolled outbursts with the brain injured patient
2. Demonstrate the skills required to manage and prevent injury to the patient and staff during an outburst with a brain injured patient.
3. Demonstrate 3 ways to manage the common triggers for the brain injured patient.

Instructional Methods: Simulation/Return Demonstration

Learners: Learners: C-Clinical staff members- Staff performing duties in the clinical care areas

SB 12/13/2021

Top of document
Central Line Dressing and Maintenance Course  

Course Overview

This course provides basic conceptual and operational knowledge to healthcare clinicians responsible for the care of patients with central venous access devices. Clinicians will expand their knowledge while receiving hands on practice for the maintenance and care of central venous access devices according to evidence based practices.

Learning Outcomes

1. Describe protective measures to guard against central line acquired bacteremia.
2. List reasons for use and care of central lines.
3. Identify the various types of central lines.
4. Describe assessment criteria and documentation required for patients with central venous catheters.

Instructional Methods: Oral Presentation, Simulation/Return Demonstration, with or without exam

Learners: C-Clinical staff members- Staff performing duties in the clinical care areas

JV 1/4/2021

SB 1/5/2021

Top of the Document
Central Line Insertion for Advanced Providers AP

Course Overview

This comprehensive course reviews the essential anatomy, the procedure for both internal jugular and subclavian insertion techniques, and complication that can occur when inserting central lines. There is an online virtual module followed by hands simulation with task trainers that allow learners the opportunity to insert a central line while managing complications that can arise.

Learning Outcomes

1. Identify essential anatomy related to central line catheters.
2. Explain important tasks recommended before central line insertion.
3. Describe how to prepare for the procedure.
4. Review how to insert central lines via the internal jugular insertion site.
5. Review how to insert central lines via the subclavian insertion site.
6. Explain important tasks recommended after central line insertion.
7. Recognize and manage common or important procedural complications.
8. Recognize radiographic abnormalities.
9. Describe how to reduce the risk of infection.

Instructional Methods: Oral Presentation, Simulation

Learners: AP- Advanced Practice Practitioners, Physicians, and Residents
Change in Patient Condition Simulation

Course Overview

This course provides education for clinicians to manage a patient with a change in condition. Included are three simulated scenarios representing a rapid response, cardiac arrest, and stroke alert protocol. Clinicians will have the opportunity to actively participate in at least one scenario while observing and evaluating the other two scenarios.

Learning Outcomes

1. Differentiate the essential components of a patient assessment and reassessment.
2. Compare and contrast changes in a patient’s condition.
3. Demonstrate the use of critical thinking and clinical reasoning to establish and implement treatment priorities, and evaluate using appropriate institutional resources.
4. Describe the role of the nurse within the interprofessional team in response to a change in the patient’s condition.
5. Analyze the importance of interprofessional communication and the impact of team functioning on patient outcomes.

Instructional Methods: Oral presentation, Simulation/Return Demonstration

Learners: C-Clinical staff members- Staff performing duties in the clinical care areas.
Chronic Condition Assessment Course  C

Course Overview

Learners will review general head to toe assessment skills and specific considerations for clients with the following conditions: Chronic Obstructive Pulmonary Disease (COPD), Congestive Heart Failure (CHF), Pneumonia, Dehydration, Urinary Tract Infections (UTI) and Cellulitis/Skin Infections. Learners will engage in high fidelity simulated scenarios that will allow them to assess and manage the care of these patients with these specific health conditions.

Learning Outcomes

1. Demonstrate management of specific chronic conditions by conducting a thorough assessment.
2. Identifying a proper treatment plan and appropriate referrals to providers and services when necessary.
3. Review the potential treatment plans with providers and family/primary care givers.

Instructional Methods: Oral Presentation, Simulation/Return Demonstration, with or without Exam

Learners: C-Clinical staff members- Staff performing duties in the clinical care areas
Chest Tube Training  R

Course Overview

This course is designed to provide education for the set-up, connection and maintenance of a chest drainage system. The learner will understand how to successfully assist with insertion of a chest tube, apply appropriate dressing and demonstrate troubleshooting techniques for common chest tube issues.

Learning Outcomes

1. Demonstrate the proper procedure for chest tube drainage system set up and connection to suction.
2. Apply and change a chest tube dressing.
3. Recognize and discuss the solutions for three common problems that may arise with a chest drainage system.
4. Review the daily necessary interventions needed to maintain a chest tube and chest drainage system.

Instructional Methods: Oral Presentation, Simulation/Return Demonstration

Learners: R- Registered Nurses (RN) Only

SB 1/5/2021
JV 1/4/2021
Clinical Communication Course  C

Course Overview

Learners will be immersed in interactive simulated scenarios that will allow them to translate their knowledge of specific client populations into effective treatment plans. The focus of this course will be on the utilizing effective communication skills to convey important details about their patient to families and providers needed to manage their care.

Learning Outcomes

1. Utilize effective communication skills to discuss treatment plans with providers and family/primary care givers.
2. Explain the importance of communication in the clinical role.
3. Identify the challenges facing patients and families and the role of communication in resolving those challenges.

Instructional Methods: Oral Presentation, Simulation/Return Demonstration, with or without exam

Learners: C-Clinical staff members- Staff performing duties in the clinical care areas

SB 1/5/2021
JV 1/4/2021

Top of the Document
Code “O” Obstetrics Simulation  C

Course Overview

This course reviews the interdepartmental response to a severe and potentially life threatening obstetrical event (such as hemorrhage, amniotic fluid embolism, shoulder dystocia, eclampsia). Learners will participate in interactive high fidelity simulations of life threatening obstetrical events and have the opportunity to practice the skills necessary to respond to various emergencies.

Learning Outcomes

1. Describe evidence-based protocols for common obstetric emergencies.
2. Explain the correct technique and key responsibilities of clinicians during obstetric emergencies.
3. Demonstrate effective communication skills during obstetric emergencies.

Instructional Methods: Oral presentation, Simulation/Return Demonstration

Learners: C- Clinical staff members- Staff performing duties in the clinical care areas
Course Facilitator Continuing Education Series A

Course Overview

This yearly customized simulation series provides ongoing simulation education based on best practice standards to all simulation course facilitators. It is designed based on request from STAR Center course facilitators obtained through yearly surveys. Learners’ participant in interactive simulation scenarios where they learn to use the simulators, troubleshoot any technically issues, practice the art of briefing, and learn new trends in simulation based education.

Learning Outcomes

1. Incorporate best practice in the design of simulation based education.
2. Demonstrate the ability to operate simulators and task trainers to meet learning objectives.
3. Discuss new innovations in simulation education.
4. Demonstrate the ability to integrate simulation into clinical education.

Instructional Methods: Online, Oral presentation, Simulation/Return Demonstration

Learners: All staff throughout Allegheny Health Network
American Heart Association-Cardiopulmonary Resuscitation (CPR)/Basic Life Support (BLS) A

Course Overview

The Basic Life Support (BLS) course teaches learners to recognize several life-threatening emergencies and to respond appropriately. Training includes instructions for cardiopulmonary resuscitation (CPR) and the use of automated external defibrillators (AEDs). The course also covers relief of choking; including interventions such as the Heimlich maneuver and back blows/chest thrusts. The BLS course curriculum includes rescue guidelines for infants, children, and adults endorsed by the American Heart Association.

Learning Outcomes

1. Perform high-quality CPR for adults, children, and infants.
2. Initiate the chain of survival as soon as a possible problem is identified.
3. Initiate immediate high-quality chest compressions for any victim.
4. Provide early defibrillation with an automated external defibrillator (AED) when one is available.
5. Initiate rescue breathing when respiration is inadequate.
6. Perform BLS as an effective team member during multi-rescuer CPR.
7. Relieve a choking episode in adults and infants.

Instructional Methods: Oral presentation, Simulation/Return Demonstration, with exam

Learners: A- All staff throughout Allegheny Health Network

SB 1/5/2021

JV 1/4/2021
Crash Cart Review  C

Course Overview

This course provides a detailed overview of each component of the crash cart. Learners will be given a hands-on review of the standard supplies, medications and equipment located on and within the crash cart. Additionally, a review of the basic operation of the monitor/defibrillator and standard replacement process will be included in this education.

Learning Outcomes

1. Identify the essential supplies, medications and equipment needed on the crash cart to use for the first five minutes of a resuscitation or rapid response.
2. Demonstrate basic operation of the monitor/defibrillator using the multifunction pads.
3. Explain the standard process for crash cart replacement.

Instructional Methods: Oral presentation, Simulation/Return Demonstration

Learners: C- Clinical staff members- Staff performing duties in the clinical care areas

SB 1/5/2021
JV 1/4/2021

Top of the Document
AHN Critical Care Skills Review  R

Course Overview:

This simulation course provides an opportunity for the novice clinicians to perform the daily intensive care assessment while identifying a change in a septic patient. The learner is able to manage the common difficulties associated with ventilated critically ill patients including maintenance of arterial lines and medication infusions.

Learning Outcomes

1. Demonstrate an intensive care daily assessment.
2. Identify and manage a patient with hypotension in the ICU.
3. Demonstrate how to do a RASS (Richmond Agitation and Sedation Scale) exam on the intubated patient.

Instructional Methods: Simulation

Learners: R Registered Nurses

SB 3/30/2023
Emerus Inpatient Diabetic Ketoacidosis Management  

Course Overview

This simulation is intended provide registered nurses and support staff the opportunity to the review skills needed to treat diabetic ketoacidosis in the inpatient setting of the Emerus Community hospitals. The simulation will emphasize review of electronic orders and decision making in administering IV fluids and IV insulin. Additional skills reviewed during this simulation will include assessment of the signs and symptoms of diabetic emergencies, mixing insulin for infusion, following complex protocol orders, and programming the facility-specific pumps for infusions.

Learning Outcomes

1. Interpret inpatient orders relating to diabetic ketoacidosis based on evaluation of laboratory values.
2. Administer intravenous fluids according to the order set and laboratory values.
3. Preparation and administer an intravenous insulin infusion.

Instructional Methods: oral presentation, Simulation

Learners: C- Clinical Staff members

mjm 03/30/23

Top of document
ECMO Training  C

Course Overview

This course is designed for healthcare professionals who participate in the management of patients with refractory respiratory or circulatory failure requiring extracorporeal life support. Learners will review VA-venoarterial and VV-venovenous ECMO concepts using patient case scenarios, experience hands-on learning and troubleshooting of the clinical case.

Learning Outcomes

1. Describe indications and limitations of ECMO in management of severe respiratory or circulatory failure.
2. Identify different components and configurations of the ECMO circuit.
3. Demonstrate understanding of dynamic changes in physiology during ECMO.
4. Address considerations in general management of the patient on ECMO.
5. Formulate a framework to troubleshoot complications arising during ECMO.

Instructional Methods: Oral Presentation, Simulation

Learners: C - Clinical Staff Members who manage ECMO patients

12/16/2021 SB

Top of document
Electrocardiogram (ECG) Course  C

Course Overview

This course is designed to teach the proper technique of performing an electrocardiogram (ECG). The learner will demonstrate the correct procedure and the equipment needed to perform an accurate ECG. The course content includes how to prepare the patient for the procedure, proper lead placement and management of artifact.

Learning Outcomes

1. Understand why an electrocardiogram (ECG) is performed.
2. Describe the importance of correct placement of ECG leads.
3. Explain the cause of artifact and how to resolve it.
4. Demonstrate how to prepare a patient and perform an electrocardiogram (ECG).

Instructional Methods: Oral presentation, Simulation/Return Demonstration, with or without exam

Learners: C- Clinical staff members- staff performing duties in the clinical care areas

SB 1/5/2021
JV 1/4/2021

Top of the Document
Extravasation and Infiltration Intravenous (IV) Course  

Course Overview

Intravenous therapy is one of the most common nursing processes. One of these risks of IV therapy is an IV extravasation; the inadvertent infusion of a vesicant into tissue rather than into the intended venous system. This complication can result in catastrophic injury with devastating effects. This course includes content regarding appropriate IV sites, identification of drugs and solutions that are vesicants, and the appropriate actions needed for an extravasation using evidence based practice.

Learning Outcomes

1. Distinguish the difference between an infiltration and an extravasation.
2. Demonstrate the appropriate actions necessary in the event of an extravasation.
3. Discuss appropriate measures needed to prevent an IV extravasation.

Instructional Methods: Oral presentation, Simulation/Return Demonstration, with or without exam

Learners: R- Registered Nurses (RN) Only

SB 1/5/2021

JV 1/4/2021

Falls Escape Room

Course Overview

The purpose of The STAR Center falls escape room is to sharpen critical thinking skills needed to prevent fall hazards while using effective communication and teamwork. Participants are expected to properly assess for falls, calculate the right falls score, and put into place interventions to prevent a fall from occurring. Team members must exercise leadership skills throughout the activity to engage in group critical decision making in order to successful identify safety risks and put interventions in place to decrease falls.

Learning Outcomes

1. Demonstrate critical thinking skills to successfully assess falls risk score.
2. Communicate effectively among team members.
4. Identify individual strengths in problem solving.
5. Communicate effectively among team members.
6. Perform proficient clinical skills.
7. Manage time effectively.

Instructional Methods: Simulation/Return Demonstration, with or without Oral Presentation, with or without Exam.

Learners: C- Clinical staff members- Staff performing duties in the clinical care areas

TJ 3/28/2022
SB 1/5/2021
Fire in the Operating Room OR C

Course Overview

This course is designed to teach employees proper response to fires that erupt in the operating room. Staff members will learn how to appropriately react to four types of OR fires: 1.) airway, 2.) surgical drape, 3.) trash can, and 4.) a fire in an adjacent operating room. Learners will take a pretest, navigate through a PowerPoint presentation, watch simulation scenario and then take a posttest. In addition to these course materials, an optional video lecture on proper team responses to OR fires are also available for viewing.

Learning Outcomes

1. Demonstrate the necessary actions to take when responding to various types of OR fires.
2. Understand team members’ roles in responding to OR fires.
3. Display the ability to respond to following: airway fire, surgical drape fire, trash can fire and fire in the adjacent operating room.

Instructional Methods: Oral presentation, online, Simulation/Return Demonstration, with exam

Learners: C- Clinical staff members- Staff performing duties in the clinical care areas

SB 1/5/2021
JV 1/5/2021

Graduate Nurse Med Surg/Telemetry Skills Days  R

Course Overview

This course is designed to provide the new graduate nurse the opportunity to get hands on practice with the common skills and processes essential as they begin their new career. This course is over 2 days and includes comprehensive review of patient assessment, medication safety, mock codes, fall prevention, IV therapy and tubes and drains. Through various simulations and task trainers they will have the opportunity to practice and strengthen those essential skills.

Learning Outcomes

1. Demonstrate the steps to perform a complete physical assessment on the acute care patient.
2. Identify a patient in cardiac arrest and demonstrate the initial care.
3. Identify at risk situations during medication preparation and/or administration and the proper process to address them to ensure patient safety.
4. Determine a fall risk score on the admitted patient and identify fall risk hazards.
5. Demonstrate the proper procedures for common skills required on a med surg/telemetry unit.
   a. Chest Tubes
   b. Trach Care
   c. NG Tube insertion
   d. Feeding pumps
   e. Wound drainage systems

Instructional Methods: Oral presentation, Simulation/Return Demonstration

Learners: R-Registered Nurses Only

SLB 9/12/2023

Handoff Communication Course  

Course Overview

This online course is designed for all hospital staff to improve communication skills between clinicians working within the interprofessional healthcare team. The course incorporates the use of proper communication skills from the TeamSTEPPS program developed by the Department of Defense’s Patient Safety Program in collaboration with the Agency for Healthcare Research and Quality (AHRQ).

Learning Outcomes

1. Recognize the importance of communication and teamwork in preventing errors.
2. Recall teamwork and communication strategies.
3. Distinguish improper communication between healthcare staff.
4. Identify techniques to improve communication skills.
5. Implement techniques to enhance communication skills in the workplace.

Instructional Methods: Oral presentation, Online, Self-learning

Learners – A- All staff throughout Allegheny Health Network
Hourly Rounding Video Training  C

Course Overview

This course is designed to provide the education to successfully facilitate purposeful hourly rounding. Learners will focus on the 4 P’s of hourly rounding: pain, personal hygiene, position, and personal possessions while learning how to cluster care to improve the overall patient experience.

Learning Outcomes

1. Describe the benefits of hourly rounding.
2. Demonstrate the practice of hourly rounding and patient interactions.
3. Discuss key behaviors and responsibilities associated with hourly rounding.
4. Recognize the importance of validating rounding behaviors.

Instructional Methods: Online, Self-learning Module

Learners: C- Clinical staff members- Staff performing duties in the clinical care areas
ICU Nurse Skills Simulation  R

Course Overview

This 4 hour course is for the new ICU nurse to sharpen and review essential ICU skills that include: Set up for RSI Intubation, Arterial Line Set up and Mechanical Ventilator Management, BiPap management, ABG Review, Chest Tube Maintenance, Central Line Removal and dressing change and ZOLL monitor review. The learner will have hands on time going through a variety of stations to become more comfortable with the skills. 5 stations will be set up

Learning Outcomes

1. Demonstrate proficiency of setting up a sterile field for procedures
2. Identify how to troubleshoot the most common ventilation alarms
3. Determine the appropriate medications utilized during a rapid sequence intubation
4. Demonstrate increased confidence with essential ICU nursing skills.

Instructional Methods: Oral Presentation, Simulation with Task Trainers

Learners: R Registered Nurses
Intravenous (IV) Pump Training   R

Course Overview

This course is designed to provide hands on training for the how to operate and troubleshoot the current infusion pumps for intravenous (IV) infusions according to the clinician’s scope of practice.

Learning Outcomes

1. Demonstrate the ability to operate an IV infusion pump by priming and loading/unloading the solution set
2. Program maintenance primary and secondary infusions.
3. Verbalize troubleshooting techniques for system errors.

Instructional Methods: Oral Presentation, Simulation/Return Demonstration, with or without exam

Learners: R- Registered Nurses (RN) Only
Implanted Port Accessing and De-accessing Course

Course Overview

This course is designed for nurses caring for the patient with an implanted venous port. This education focuses on the safe and effective use of the implanted venous port, accessing and de-accessing an implanted port and obtaining a blood specimen from the device. Learners will review how to troubleshoot the most common problems associated with implanted ports.

Learning Outcomes

1. Identify an implanted venous port from other types of central venous access devices.
2. Define the proper procedure for accessing and de-accessing an implanted port.
3. Describe the procedure for drawing a blood specimen from a port.
4. Verbalize at least 3 potential port complications and solutions that may remedy the problem.

Instructional Methods: Oral Presentation, Simulation/Return Demonstration, with or without exam

Learners: R- Registered Nurses (RN) Only

SB 1/5/2021
JV 1/5/2021
Independent Double Check Video Training  

Video Overview

This video is designed to provide clinicians the training needed to perform an independent double check according to Allegheny Health Network - High Alert Medication Policy for safe medication use. Learners will understand the importance of this process and view three common medication passes of high alert medications. Clinicians will learn the standard documentation of a dual sign off required for an independent double check.

Learning Outcomes

1. Understand the critical components of an independent double check.
2. Perform and independent double check for high alert medications.
4. Explain how an independent double check of a high alert medication produces a valuable defense to prevent harmful errors from reaching patients.

Instructional Methods: Online, Self-Learning Module.

Learners: C- Clinical staff members- Staff performing duties in the clinical care areas.

IV Therapy Curriculum for the Licensed Practice Nurse (LPN)  L

Course Overview

In compliance with the PA State Board of Nursing requirements, this course is designed to provide comprehensive IV therapy and insertion skills training education to meet the learning needs of the licensed practical nurse. Using a PowerPoint presentation and simulation education, the LPN will be provided with the knowledge and clinical skills needed to deliver the highest quality of safe, effective, and efficient IV care to meet the needs of their patients. Instruction includes a review of the circulatory system, fluid and electrolyte balance, insertion procedure, techniques for proper and successful catheter insertions, care, assessment, and maintenance post-catheter insertion.

Learning Outcomes

1. Define the standards of care for the insertion of peripheral intravenous (IV) catheter insertion
2. Develop thorough assessment skills obtaining the patient’s venous access history
3. Communicate an understanding of fluid and electrolyte balance and how it pertains to IV therapy
4. Verbalize understanding of blood product, TPN, and PCA maintenance
5. Review the anatomy and physiology of the cardiovascular system as it pertains to circulation
6. Describe possible complications of IV therapy
7. Develop adequate communication skills discussing plan of treatment with the patient
8. Demonstrate proficiency inserting a peripheral IV catheter
9. Demonstrate use of IV pump, how to initiate continuous IV medications, and how to convert continuous infusions to intermittent infusions
10. Demonstrate proficiency in care and maintenance of peripheral and central IV catheters

Instructional Methods: Oral Presentation, Simulation

Learners: L- Licensed Practical Nurses

Leadership Rounding  C

Course Overview

This course immerses learners in experiential simulated leadership rounding scenarios in a clinical setting. Learners will gain an understanding of how purposeful leadership rounding can positively impact patient care by enhancing safety, quality and customer service. This interactive course will provide a series of realistic patient-centered scenarios that will validate the learners’ ability to effectively communicate and deal with complex healthcare issues.

Learning Outcomes

1. Identify the positive impact leadership rounding has on the patient experience and organization.
2. Effectively conduct a leadership rounding session for both patients and staff.
3. Facilitate an effective leadership rounding experience.

Instructional Methods: Simulation/Repeat Performance, Oral Presentation

Learners: C- Clinical staff members- staff performing duties in the clinical care areas
Malignant Hyperthermia  R & AP

Course Overview

This course is for OR, PeriOp, and ICU personnel that recover patients from the operating room. The simulation demonstrates a patient exhibiting malignant hyperthermia. It allows the learner to identify the symptoms and demonstrate appropriate management of the patient. The learner will also be able to identify a patient with a delayed malignant hyperthermia reaction.

Learning Outcomes

1. Identify the signs and symptoms of malignant hyperthermia
2. Demonstrate appropriate patient care of a patient exhibiting malignant hyperthermia
3. Identify the process of initiating a MH Crisis Alert and the location of the malignant hyperthermia cart

Instructional Methods: Simulation

Learners: R and A – Registered Nurses, CRNA’s, and Advanced Practitioners

12/14/2021
Course Overview

Acute respiratory distress syndrome (ARDS) and COVID 19 pneumonia continues to be a life-threatening issue. Supine positioning has been the traditional method of managing these patients. Manually proning has been in use for years and has been shown to decrease mortality in patients with severe ARDS. Prone position ventilation allows for the recruitment of the otherwise collapsed dorsal alveoli, thus improving oxygenation. This is a two part course. Part 1 provides the knowledge and skills necessary for ICU trained nurses and respiratory therapists to practice and perfect their skills in proning a ventilated patient. Part 2 consist of a video entitled, Ventilated Patient Proning Video Training that provides a step by step guide to the proning process. Please see page 60 for further details on the video.

Learning Outcomes

1. Determine the sedation and paralysis prior to changing position of a patient.
2. Demonstrate delegating roles and communication with team members to move a patient in one movement.
3. Demonstrate the turning of a sedated and paralyzed patient while on ventilator.

Instructional Methods: Simulation

Learners: C - Clinical Staff Members

12/14/2021
Medication Safety In-Situ Simulation Cart

Course Overview

The purpose of this course is to offer clinicians interactive medication safety training through an In-Situ medication safety cart. In short practice periods of 5-7 minutes, the learner will execute the medication activity designated for the specific medication. The medication safety cart can be oriented to address any medication safety concerns from preparation to administration of medications.

By using computer assisted simulation, clinicians will be immersed into a simulated hands-on medication administration scenario. In this scenario, clinicians will have to apply critical thinking skills in order to administer medication to a patient in a safe and effective manner according to Allegheny Health Network (AHN) policy.

This activity can be built to any medication and any departmental need.

Learning Outcomes

1. Identify at risk situations during medication preparation and/or administration and the proper process to address them to ensure patient safety.
2. Demonstrate appropriate critical thinking during the medication preparation and/or administration process.
3. Perform medication preparation and/or administration processes engaging the 6 rights of medication administration.

Instructional Methods: Computer-based activity, simulation

Learners: C – Clinical staff performing duties in the clinical areas (ex: Pharmacy Tech, Pharmacist, LPN, RN, Nurse Practitioner, Physician Assistant, and Anesthesiologist)

mjm 03/30/2023
Medication Safety Virtual Escape Room

Course Overview

This virtual medication safety education program is aimed to reduce the harm caused to patients by medication errors, specifically errors related to those of high-alert medications. Participant need to successfully navigate through five separate medication safety missions in order to escape. Learners complete pre and post confidence surveys to assess their knowledge of best practices for medication safety.

Learning Outcomes

1. Explain Allegheny Health Network (AHN) best practices in medication safety.
2. Demonstrate the 5 rights of medication safety to prevent medication errors.
3. Report medication errors and adverse reactions using the occurrence system.
4. Discuss the importance of bar code scanning when administering medications.
5. Utilize AHN policies and procedures used to prevent medication errors

Instructional Methods: Online, Self-learning Module

Learners: C- Clinical staff members- Staff performing duties in the clinical care areas
Mock Code / Rapid Response Team Training

Course Overview

This course will provide the learners with the critical skills necessary to respond and manage a Code Blue/Rapid Response situation in a clinical setting. The learners will demonstrate effective basic life support (BLS) skills, ACLS Advanced Cardiac Life support) and PALS (Pediatric Advanced Life Support) according to the American Heart Association guidelines. Through interactive simulated scenarios, interprofessional team members will use effective communication in the decision making process while demonstrating proper skills needed to effectively resuscitate a patient.

Learning Outcomes

1. Demonstrate immediate recognition of a cardiac arrest or change in patient condition requiring a rapid response team.
2. Activate the emergency response system.
3. Demonstrate effective life support skills i.e.: CPR, BVM and AED application.
4. Identify roles of each team member in the clinical setting.
5. Integrate effective communication skills and team dynamics during the rapid response or resuscitation.

Instructional Methods: Simulation/Return Demonstration, with or without Oral Presentation, with or without Exam.

Learners: C- Clinical staff members- Staff performing duties in the clinical care areas

Mock Code Escape Room  C

Course Overview

The purpose of The STAR Center escape room is to sharpen critical thinking skills needed to manage a mock code while using effective communication and teamwork. Participants are expected to properly use the crash cart equipment, apply and use the defibrillator/AED, and demonstrate effective CPR. Team members must exercise leadership skills throughout the activity to engage in group critical decision making in order to successful resuscitate the patient and gain access out of the room.

Learning Outcomes

8. Demonstrate critical thinking skills to successfully resuscitate the patient.
9. Communicate effectively among team members.
11. Identify individual strengths in problem solving.
12. Communicate effectively among team members.
13. Perform proficient clinical skills.
14. Manage time effectively.

Instructional Methods: Simulation/Return Demonstration, with or without Oral Presentation, with or without Exam.

Learners: C- Clinical staff members- Staff performing duties in the clinical care areas

Nasopharyngeal Swab Procedure Video

Video Overview

This video provides the basic instructions on how to accurately perform a nasopharyngeal swab collection. The training includes understanding of the correct specimen collection equipment, personal protective equipment and identifies the correct anatomical landmarks to obtain an acceptable nasopharyngeal specimen.

1. Verbalize the supplies needed for a nasopharyngeal swab collection including personal protective equipment.
2. Describe the procedure steps for properly collecting a nasopharyngeal swab collection.

Instructional Methods: Online, Self-Learning module.

Learners: R- Registered Nurses (RN) Only
Open Chest Resuscitation of the Post Cardiac Surgery Patient

Course Overview:

This simulation is to provide the learner an opportunity to practice the procedure and process of sternotomy during cardiac arrest of the post cardiac surgery patient. This is a hands on simulation that will provide an opportunity for the learner to practice this high risk, low frequency procedure and become familiar with the specialized equipment needed. It is an interdisciplinary simulation that focuses on skills and communication between providers. The learners will have an opportunity to practice setting up for a re-sternotomy and assisting with the procedure. Learners will identifying essential roles of each team member. It will conclude with a discussion on transport considerations for this patient.

Learning Outcomes

1. Identify the rapidly declining post cardiac patient.
2. Demonstrate the appropriate steps in the re-sternotomy procedure
3. Determine the necessary roles of those involved in the resuscitation.
4. Demonstrate clear and closed loop communication between disciplines.

Instructional Methods: Simulation

Learners: C - Clinical Staff Members that manage Post Cardiac Surgery Patients

Oral Maxillary Facial Surgery Simulations       AP

Course Overview

This course reviews rare emergencies that can occur during oral and maxillofacial surgery. Learners will review complications that may occur during surgery regarding airway management. Once the didactic session is complete, the learners will perform the necessary skills needed to manage a difficult airway during oral or maxillofacial surgeries through immersive complex simulated scenarios using high fidelity manikins. These scenarios require deliberate practice to occur to manage rare surgical emergencies.

Learning Outcomes

1. Identify the patients at highest risk for OMFS emergencies
2. Recognize the signs and symptoms of common anesthesia related emergencies
3. Develop differential diagnosis for common emergency presentations
4. Perform the necessary interventions to manage common OMF surgical emergencies
5. Demonstrate the use of the drugs and equipment used to manage medical emergencies

Instructional Methods: Oral Presentation, Simulation

Learners: AP- Advanced Practice Practitioners

Patient Safety - One Room at a Time

Course Overview

This course allows learners to enter a virtual clinical environment with multiple patient safety hazards. Learners will understand the importance of assessing a clinical environment and are required to implement appropriate interventions to ensure clinicians and patients remain safe.

Learning Outcomes

1. Identify patient safety hazards in the clinical environment.
2. Recognize the importance of assessing the environment for potential and existing safety hazards.
3. Implement appropriate interventions to ensure a safe clinical environment.

Instructional Methods: Online, Self-Learning, with or without Exam

Learners: A- All staff throughout Allegheny Health Network
Patient Safety-Room of Errors Escape Room  A

Course Overview

This realistic escape room is designed to validate the learners’ ability to identify unsafe issues within the patient environment that impact patient care. Each safety hazard identified are upheld from policies and procedures from various healthcare governing agencies such as the Department of Health (DOH), The Joint Commission (TJC), Occupational Safety Health Administration (OSHA), Centers for Disease Control (CDC) and Infection Control. This escape room is designed to foster team dynamics amongst learners while maintaining a safe environment of care.

Learning Outcomes

1. Recognize issues related to safety and hazards in the environment for the patient.
2. Locate safety hazards that are patient related, healthcare provider related, or system related that may cause harm or potentially lead to harm.
3. Identify the regulatory standards of the patient care environment from the Department of Health (DOH), OSHA, Infection control, The Joint Commission (TJC) and Centers for Disease Control (CDC).
4. Understand the steps taken when a citation is issued or not following the quality and safety regulations.

Instructional Methods: Simulation/Return Demonstration, with or without Exam.

AHN Pediatric Codes in the Emergency Department

Course Overview

The purpose of this course is to provide clinicians with the critical skills necessary to respond and manage a pediatric patient in the emergency department. This course will provide an opportunity for participants to activate the code blue process and demonstrate effective Pediatric Advanced Life Support (PALS) skills while using effective communication. The skills to be reviewed include, use of equipment on the crash cart, application and use of the defibrillator/AED, demonstration of effective CPR, and pharmacological treatment based on best practice guidelines.

The interprofessional team members will utilize their leadership skills to engage in the decision making process based on situational awareness. This course will bridge the gap between both theory and essential clinical skills by addressing cognitive, affective, and psychomotor domains through participation in a simulated interprofessional Code Blue scenario.

Learning Outcomes

1. Demonstrate immediate recognition of a respiratory distress.
2. Activate the emergency response system.
3. Demonstrate effective basic life support skills i.e.: CPR and AED application.
4. Identify items in the crash cart.
5. Administer appropriate medical treatment based on PALS protocols.
6. Describe the roles of the interprofessional Code Blue team members.
7. Integrate effective communication techniques during the resuscitation while delivering an effective hand off communication report.

Instructional Methods: Oral Presentation, Simulation

Peripheral Intravenous (IV) Therapy Course   R & L

Course Overview

This course is designed to provide the learner with the knowledge and clinical skills needed to deliver safe and efficient IV care according to policy. Instruction includes a review of the peripheral IV insertion procedure and post IV care and assessment. Hands on practice of IV insertion using a variety of the IV task trainers included in this training.

Learning Outcomes

1. Define the standards of care for peripheral IV catheter insertion.
2. Demonstrate simulation proficiency inserting a peripheral IV catheter.
3. Establish simulation proficiency in care and maintenance of peripheral IV catheters.

Instructional Methods: Oral Presentation, Simulation/Return Demonstration, with or without Exam.

Phlebotomy Course  C

Course Overview

This course is designed to teach the learner the skills and techniques to perform phlebotomy. The curriculum includes a review of specific collection tubes and the proper procedure to preserve a collected sample. A video demonstration is utilized as a resource on the proper technique of blood collection from an adult patient. The opportunity for hands-on phlebotomy practice using state of the art task trainers is provided.

Learning Outcomes

1. Demonstrate the correct phlebotomy procedure.
2. Describe methodologies for collection of blood samples using appropriate collection tubes.
3. Practice phlebotomy on adult manikins.
4. Discuss the responsibilities of the practitioner during a phlebotomy procedure.

Instructional Methods: Oral Presentation, Simulation/Return Demonstration, with or without exam.

Physical Assessment for Acute Care Nurses

Course Overview

The purpose of this course is to review the process of performing a head to toe physical exam for the adult patient in the acute care setting. Registered nurses will perform a complete assessment identifying any abnormal findings while using their critical thinking skills to determine the appropriate plan of action. Along with a detailed physical assessment, obtaining vital signs, management of gastric tubes, dressing changes and ostomy assessments will be addressed.

Learning Outcomes

1. Perform a complete head to toe physical assessment on the acute care patient.
2. Identify abnormal findings while performing a physical assessment.
3. Develop an appropriate plan of care based on the physical assessment.

Instructional Methods: Simulation

Learners: R – Registered Nurses
Poverty Simulation  A

Course Overview

What is a Poverty Simulation? A Poverty Simulation workshop is a facilitated two-hour to three hour immersive experience designed to give participants a glimpse into the structural barriers facing individuals living on low-income. The simulation allows participants to take on roles of members of up to 26 real-life families, all facing a variety, but typical challenging circumstances of those who live at the poverty line. Following the simulation a guided debriefing is facilitated for participants to share their observations and insights from the activity.

Learning Outcomes

1. Determine the impact of participating in a poverty simulation related to participant’s attitudes toward poverty.
2. Discover the challenges that millions of low income individuals must face each and every day.
3. Recognize what participants learned about poverty from taking part in a poverty simulation.
4. Identify areas of change that can directly impact the effects of poverty on individuals, families and communities.

Instructional Methods: Oral Presentation, Simulation

Learners: A- All staff throughout Allegheny Health Network

Prebriefing and Debriefing Essentials Course

Course Overview

The purpose of this course is to introduce facilitators to the essentials of conducting effective prebriefing and debriefing sessions. This education emphasizes the importance of these components as well as providing opportunities for course facilitators to practice and perfect these essentials skills. Through live interactive sessions, learners will learn how to effectively conduct a comprehensive simulation experience. The elements of the Plus/Delta/Gamma debrief model to yield successful prebriefing and debriefing sessions and to positively impact learning will be stressed.

Learning Outcomes

1. Explain how to lead prebriefing and debriefing sessions.
2. Articulate the importance of prebriefing and debriefing.
4. Conduct effective prebriefing and debriefing sessions.

Instructional Methods: Oral presentation, Simulation/Repeat Demonstration, Online Self-Learning Module, with or without Exam

Learners: C- Clinical staff members- staff performing duties in the clinical care areas
Pressure Injury Prevention Course  

Course Overview

Participants of this course will learn how to perform an accurate and thorough skin assessment for patients at risk for skin breakdown. Content includes education on prevention, risk assessment, and treatment strategies for pressure injuries. The learner will have the opportunity to accurately perform and document a comprehensive skin assessment including the staging of pressure injuries identified.

Learning Outcomes

1. Describe ideal pressure injury prevention practices.
2. Perform and document a comprehensive skin assessment.
3. Identify pressure injury risk factors.

Instructional Methods: Oral presentation, Simulation/Return Demonstration, with or without Exam.

Learners: C- Clinical staff members- staff performing duties in the clinical care areas
Rapid Patient Assessment Course  R

Course Overview

This course provides clinicians the knowledge and the skills needed to complete a thorough assessment to manage and prioritize patient care. Learners will practice rapid assessment techniques to make a quick and initial determination regarding the level of care needed for the patient. Emphasis is placed on early recognition of decompensation exhibited by the patient that would require the activation of the emergency response team.

Learning Outcomes

1. Perform an accurate rapid patient assessment.
2. Apply the rapid assessment technique to determine the urgency of the patient’s condition.
3. Describe the steps to complete a three step rapid patient assessment.
4. Verbalize an appropriate plan of care based on that assessment.

Instructional Methods: Oral Presentation, Simulation/Return Demonstration, with or without Exam.

Course Overview

This simulation is to provide the learner an opportunity to practice the procedure and process of sternotomy during cardiac arrest of the post cardiac surgery patient. This is a very unique procedure that requires a specially trained team. It is an interdisciplinary simulation to allow for all those involved to work together. The learners will have an opportunity to practice initiating the process, identifying essential roles, going through the steps to set the patient up for a re-sternotomy and assist with the procedure. This is a hands-on simulation that will provide an opportunity for the learner to practice this high-risk, low-frequency procedure and become familiar with the specialized equipment needed. Afterwards a discussion on transport considerations for this patient.

Learning Outcomes

5. Identify the rapidly declining post cardiac patient.
6. Demonstrate the appropriate steps in the re-sternotomy procedure
7. Determine the necessary roles of those involved in the resuscitation.
8. Demonstrate clear and closed loop communication between disciplines.

Instructional Methods: Oral Presentation, Simulation

Learners: AP-Advanced Practice Providers, RN-Registered Nurses
Science, Technology, Engineering, Mathematics, and Medical (STEMM) Program

Course Overview

This eight month course is offered to middle and high school students interested in science, technology, engineering, mathematics and medicine. It will inspire and challenge the youth into different types of learning outside the traditional classroom setting. The students are immersed into the various areas of the STEMM through simulated activities focused on an interdisciplinary approach. Each month the students are exposed to one of the disciplines to develop critical thinking, improve technology literacy, problem solving skills and be mentored in an area of interest. Ultimately through all the sessions the students will complete a project with the assistance of their mentor to be presented at the last session. This will give the students a sense of personal growth, accomplishment and improved desire to pursue a STEMM career.

Learning Outcomes

1. Demonstrate creativity and foster teamwork each month
2. Identify and explore ways to cultivate critical thinking
3. Demonstrate a broader and deep respect for technology
4. Describe what work is involved in creating high fidelity mannequins and the elements of realism into simulation
5. Demonstrate how mathematics are used in healthcare careers
6. Perform basic life support skills on mannequin.

Instructional Methods: Oral Presentations, Simulation, Hands on activities

Security Onboarding Simulation Course

Course overview:
This session will describe a novel simulation onboarding for security personnel that includes orientation to the healthcare environment, de-escalation techniques and opportunities to participate in scenarios with standardize patients. The curriculum covers a wide variety of topics aimed at keeping nonclinical security personnel safe in a hospital environment. At the same time, this education will train security personnel on how to keep patients, visitors and staff safe during hostile work events using de-escalation and therapeutic communication techniques.

Learning Outcomes:

- Discuss the needs for standardize simulation onboarding for security personnel.
- Describe components of the security simulation onboarding.
- Review needs assessment and measurements of evaluation used to collect data.

Instructional Methods: Oral Presentation, Simulation/Return Demonstration, with or without Exam.

Simulation Prior to Opening a New Clinical Area

Course Overview

This course uses simulation to test workflows, system processes and detect latent safety threats prior to opening a new clinical workspace. Staff working in the new environment and/or subject matter experts participate in simulated scenarios designed to test the physical layout/systems in a particular unit or facility. Debriefing sessions are facilitated to address latent safety errors and needs for redesign. The data from the scenarios is analyzed and reported to key stakeholders to enhance the design, improve patient outcomes, safety and efficiency of care.

Learning Outcomes

1. Identify key areas of concern in a clinical area that would impact patient care.
2. Recognize latent safety errors / need for redesign that impact patient outcomes.
3. Utilize analyzed data to make changes to improve patient safety and clinical efficiency.

Instructional Methods: Simulation/Repeat Demonstration, Oral Presentation

Skills Review Course - Basic Nursing

Course Overview

The purpose of this course is to provide a hands-on review of vital clinical skills using high fidelity manikins and task trainers to become more confident in clinical practice. Learners will be immersed in simulation scenarios that will require critical thinking and problem solving skills to provide the appropriate patient care using basic clinical skills. This course includes: 1) Insertion of indwelling urinary catheter and nasogastric tubes, 2) Peripheral Intravenous (IV) insertion and injection review, 3) Cardiopulmonary resuscitation review and 4) Tools to improve safety and the patient experience.

Learning Outcomes:

1. Demonstrate the sterile procedure for indwelling urinary catheter insertion.
2. Perform the skill of inserting a nasogastric tube (NG) and confirm placement.
3. Execute a successful peripheral intravenous (IV) catheter insertion.
4. Administer injections using 3 techniques-intramuscular (IM), subcutaneous (SQ) and intradermal.
5. Demonstrate Basic Life Support (BLS) skills to manage a patient in arrest.
6. Utilize the AHN main page to identify important nursing resources needed for clinical care.

Instructional Methods: Oral Presentation, Simulation/Return Demonstration, with or without Exam.

STAR Center Course Facilitator Onboarding Learning Pathway

Course Overview

This Learning Path provides a standardized and streamlined onboarding process for you, our valued course facilitator.

It is a comprehensive blended learning pathway combining virtual and hands on training to teach the best practices you will need to confidently use simulation as a teaching and learning tool.

In order to begin the path as a STAR simulation course facilitator, we ask that you register for the Simulation Teaching Academic Research Training Session (STARTS) Instructor-Led Training to be held at the STAR Center. After registering for the Instructor-Led Training (ILT), click the link below to begin the web-based training prerequisites that you must complete prior to coming to the STAR Center for STARTS. In the Facilitator Onboarding Learning Path, you will have to complete the following web-based training courses:

- a. Facilitator Onboarding Needs Assessment
- b. Facilitator Onboarding Pre-Assessment
- c. Train the Trainer- 101 Training Engagement Overview
- d. Facilitator Onboarding WBT
- e. Prebriefing and Debriefing Essentials 3.0

By completing this engaging and interactive learning pathway you will have the knowledge, skills and attitude needed to bring your simulations to life.

Suicide Risk Escape Room

Course Overview

As suicide rates continue to increase so has the issue of when a potential suicide risk patient is admitted. Identification of ligature risks is complex and challenging process especially for the medical and intensive care units. This course is provide a learner the opportunity to identify potential ligature risks in a standard hospital room. It is set up as an escape room and allows the learner the opportunity to identify and remove common objects that are potential ligature risks.

Learning Outcomes

1. Determine how to keep the suicidal patient safe when admitted for a medical reason.
2. Identify common items in a medical patient room that have the potential to be a ligature risk.
3. Demonstrate how to complete the Columbia Suicide Risk Assessment.

Instructional Methods: Oral Presentation, Simulation

Trauma Informed/Sensitive Care     A

Course Overview

This course is to assist healthcare providers on understanding Trauma-Informed Care. TIC or Trauma-Informed care has become a widely recognized paradigm for creating safe spaces for individuals who have experienced trauma and reduce the likelihood that accessing care and services would cause re-traumatization. This approach has been shown too effective in reducing trauma-related symptoms. It involves recognizing, understanding and responding to the effects off all kinds of trauma. The key is to rather seeing reactions to trauma as pathological, it reframes these reactions as adaptive and coping mechanisms from the experience of the trauma. This will allow awareness of ways to anticipate and avoid institutional practices that would likely re-traumatize patients. Change the focus on the patients’ strengths and encourage participation in their care.

Learning Outcomes

1. Identify the key impacts of trauma on interpersonal interactions.
2. Demonstrate the approach and principles of practice that promote psychological safety in the behavioral health patient.
3. Demonstrate the key principles of the trauma-informed approach.

Instructional Methods: Oral Presentation, Simulation

Learners: A – All staff throughout Allegheny Health Network

Unanticipated Difficult Airway for Perioperative Nurses and Scrub Techs  

Course Overview

This course is designed for the registered nurse and scrub technician in the operating room that would be called upon to assist anesthesia with a difficult airway. The learner will participate in a lecture to understand a difficult airway and the process that occurs to secure it. They will have the opportunity to understand the essential parameters to monitor during a difficult airway. A simulation will follow, involving the process of intubation and equipment required. The learner will be able to have the opportunity to do an intubation. Then the learner will see the various situations a difficult airway can pose through the simulator. A demonstration of the various equipment needed to allow them an opportunity to see what is utilized.

Learning Outcomes

1. Identify a patient with possible difficult airway.
2. Demonstrate how to assist in the OR during a difficult airway.
3. Determine what parameters to keep an eye during a difficult airway.

Instructional Methods: Oral presentation, Simulation/Return Demonstration

Learners: C- Clinical staff members- Staff performing duties in the clinical care areas (Perioperative Registered Nurses and Scrub Techs)

SB 9/12/2023
Urinary Catheter Insertion and Maintenance Course  

Course Overview

This course is designed to instruct learners how to insert a straight and indwelling urinary catheter for both male and female patients using sterile technique. Learners will have the opportunity to demonstrate the ability to insert a urinary catheter, obtain a urine specimen from the indwelling catheter and provide routine catheter care using high and low fidelity manikins.

Learning Outcomes

1. Demonstrate proficient sterile technique for indwelling urinary catheter insertion.
2. Explain the proper procedure for urine specimen collection.
3. Describe the daily maintenance of a patient with a urinary catheter to prevent complications.

Instructional Methods: Oral presentation, online, Simulation/Return Demonstration, with Exam

Learners: C- Clinical staff members- Staff performing duties in the clinical care areas

Ventilated Patient Proning Video Training

Video Overview

Prone positioning is a technique of turning a patient from the supine to the prone position to improve oxygenation. This maneuver has been successful in the management of patients with acute lung injury or acute respiratory distress syndrome (ARDS). This video is designed to train the interprofessional team of clinicians caring for intubated patients with acute respiratory distress syndrome (ARDS) how to properly manually prone a ventilated patient.

1. Review the proper procedure to manually place an intubated patient in the prone position.
2. Describe ongoing clinical assessments necessary while an intubated patient is in the prone position.

Instructional Methods: Online, Self-Learning Module.

Learners: C= Clinical staff members - Staff performing duties in the clinical care areas
Video Visits Training Video  A

Video Overview

Video visits allow patients to interact with their provider through live video and audio on their own devices. Learners will be trained on the best practice to facilitate a successful virtual visit. This training includes a brief instructional video to prepare clinicians on how to utilize telehealth accurately and efficiently.

1. Understand the best workflow procedures for completing a video visit.
2. Demonstrate proper effective communication techniques used in a video visit.
3. Review the benefits and goals of virtual care.

Instructional Methods: Online, Self-Learning Module.

Learners: A= All staff throughout Allegheny Health Network

Vital Signs Course

Course Overview

This course is designed to teach the learner techniques of measuring and recording accurate vital signs. The curriculum content includes a discussion of the following vital signs: temperature, pulse, respiration, blood pressure, pulse oximetry, and pain. The learner will learn the proper procedure and equipment needed to accurately measure and assess these vital signs through simulation.

Learning Outcomes

1. Demonstrate the correct procedure of measuring accurate vital signs including:
   a. Temperature
   b. Pulse
   c. Respiration
   d. Blood pressure
   e. Pulse oximetry
   f. Pain Assessment

2. Measure and record vital signs on an adult, child, and infant.
3. Describe factors that can influence changes in vital signs.
4. Recognize abnormal/normal vital sign values associated with various age groups.

Instructional Methods: Oral presentation, Simulation/Return Demonstration, with or without Exam.

Learners: C- Clinical staff members- staff performing duties in the clinical care areas

ZOLL Monitor/Defibrillator Course  C

Course Overview

This course is to provide the learner with the skills needed to maintain and operate the ZOLL monitor defibrillator. The learner will be able to demonstrate how to monitor, defibrillate, cardiovert and transcutaneous pace a patient using the multifunction ZOLL monitor pads in their proper placement.

Learning Outcomes

1. Perform device maintenance checks to keep device in code ready state.
2. Demonstrate the basic steps to operate the ZOLL monitor /defibrillator.
3. Utilize the ZOLL device to monitor a patient’s heart rate, rhythm, respiratory rate, blood pressure, pulse oximetry and end tidal CO₂.
4. Determine the correct and alternate placement of multifunction ZOLL pads.
5. Manage the steps to facilitate a synchronized cardioversion.
6. Analyze and defibrillate a shockable rhythm in both hands free AED and manual mode.
7. Operate the transcutaneous pacing functions to generate a paced rhythm.

Instructional Methods: Online, Self-Learning Module, Oral Presentation, Simulation/Return Demonstration, with or without Exam

Learners: C-Clinical staff members- Staff performing duties in the clinical care areas
