
Top cancer care for
your patients, right
here in Butler.

An expert team built around each patient.

Life changes suddenly for people who are told they have cancer. But after the shock wears off, patients want help getting the most effective treatment from experts who specialize in their particular diagnosis.

The AHN Cancer Institute in Butler has oncologists who tailor treatment plans for each patient. And with starting care quickly so crucial to outcomes, our cancer team typically meets patients within three days of diagnosis to discuss next steps.

Most patients can receive all of their treatments right at the Butler location, including some of the latest therapies and innovations. And if patients have more challenging cancers, they have direct access to additional AHN oncology experts who specialize in specific types of the disease.

That means top cancer care, closer to home, and a support team that's always close by.

An innovative treatment facility centered on patients.

Everyone has their own cancer journey.

That's why the patients you refer to the AHN Cancer Institute in Butler receive personalized care from expert clinicians they come to know and trust. We design each care plan – from treating the cancer to managing side effects – according to each patient's needs.

The state-of-the-art Butler facility includes advanced diagnostics, therapies, and technology to detect and treat cancer as effectively as possible. Our capabilities, including targeted radiation, chemotherapy, and immunotherapy, give your patients the precision medicine needed to fight the disease.

The new, two-story, 34,000-square-foot building at Pullman Business Park is designed to make patients' experiences as welcoming, calming, and healing as possible. That includes spacious treatment areas with an abundance of natural light, and plenty of room for patients' loved ones to remain on-site for support.

Advanced treatments and high-quality care.

Radiation therapy

We have advanced technology to deliver highly precise radiation directly to tumors, minimizing harm to surrounding healthy tissue and organs.

Chemotherapy

Our medical oncologists determine the most effective type of medical treatments to kill cancer cells, control their growth, or relieve pain symptoms. We use chemotherapy in combination with other treatments to either shrink tumors before surgery or radiation, or to eliminate all cancer cells after other treatments have been performed.

Immunotherapy and targeted therapy

We use different types of immunotherapy to stimulate a patient's immune system to fight cancer cells. And we use targeted therapy to administer drugs directly to the abnormal parts of the cell that create the disease.

Clinical trials

AHN is dedicated to discoveries in cancer research that improve approaches to prevention, screening, and treatment and enhance the lives of cancer survivors. We are investigating hundreds of clinical trials that give patients renewed hope.

Surgical referrals

Our highly experienced AHN surgeons perform procedures to prevent, diagnose, and treat cancer. For some cancers, we use robotics and other specialized techniques so the impact to the body is as minimal as possible. That often means small scars or none at all, less pain, and a pretty quick return to daily routines. Surgeons are included on a patient's care team when the need arises.

Specialists for every type of cancer.

No one fights cancer alone. Not patients. And not us.

Each patient at the AHN Cancer Institute in Butler has a comprehensive care team, working together to ensure the best possible outcome.

And they also have the extra backing of a larger team of physicians known as tumor boards, each having deep expertise in cancer specialization. These clinicians discuss and determine the right combination of treatments, even therapies that target cancers based on a patient's genetic profile.

Through video conferencing, these meetings include doctors at all of our AHN Cancer Institute locations, including Butler. We do this so every patient has the same group expertise, no matter where they go for their doctor visits and treatments.

Like you, we're motivated by helping patients.

So when we're exploring and discovering new ways to diagnose and treat cancer, we think big and creatively. Our doctors and scientists work together to come up with novel ideas and approaches. And when one looks promising, we have to test it, evaluate it, and test it again. It can take years to prove that a scientific breakthrough is safe and effective.

And telling a patient that we have new hope makes it all worth it.

With so many breakthroughs on the horizon, we've built a new research hub where our scientists can explore them. The AHN Cancer Institute at Allegheny General Hospital (AGH) is where we research theories, test clinical trials, and explore cutting-edge technology. All with the goal of detecting cancer earlier and treating it better while reducing the impact to patients' bodies and lives.

Developed at AGH. Practiced across AHN.

This new research facility is located in Pittsburgh, but the discoveries happening here are available to patients of all 20 AHN Cancer Institute locations.

New leader is a difference maker.

David Bartlett, MD, brings three decades of cancer research, surgical oncology innovations, and proven leadership to his new role as chair of the AHN Cancer Institute. He's been a pioneer in abdominal cancer treatments and a dedicated, prolific researcher, including with the National Cancer Institute.

David Bartlett, MD
Chair, AHN Cancer Institute

“What is so impressive about the AHN Cancer Institute is that it’s expanding and growing in order to reach people in their communities,” Dr. Bartlett said. “And the staff are so dedicated to their patients and doing the right thing for the right reasons.”

Dr. Bartlett is passionate about researching treatments for patients with aggressive and complex cancers.

“The most rewarding aspect for me of being a physician is having patients who have lost hope and having the ability to say, ‘I think there is hope with a novel therapy that can make a big difference in their lives.’”

Supporting patients' physical and emotional needs.

Cancer care goes well beyond treating the disease. We focus on patients' total health before, during, and after their treatments, so they always have a support team in place.

These are some of AHN's offerings for oncology patients' unique needs.

One nurse to guide each patient

Patients have their own nurse navigator from beginning to end of their cancer journey for comprehensive guidance and support.

Testing genes for hereditary cancer

If a patient has a type of cancer that poses an inherited cancer risk, we have genetic counselors who provide testing and management options.

Rehabilitating the body

Specially trained AHN oncology physical therapists can help minimize side effects and maximize a patient's quality of life.

Keeping the heart strong

Patients who may be at risk for heart troubles because of their treatments can receive care from our cardio-oncology specialists.

Holistic approach to treatment

Patients can have complementary therapies like meditation, massage therapy, yoga, and acupuncture.

Strengthening mental health

We have psychiatrists, social workers, and support groups to help patients with their mental well-being.

Language accessibility and nondiscrimination

Allegheny Health Network (AHN) complies with applicable federal civil rights laws and does not discriminate on the basis of race, color, national origin, age, disability, or sex in its health programs and services. In order to treat individuals in a nondiscriminatory manner, AHN provides free communication and language assistance services.
