
Top cancer care for
your patients, right
here in Erie.

An expert team built around each patient.

Life changes suddenly for people who are told they have cancer. But after the shock wears off, patients want help getting the most effective treatment from experts in their cancer.

The AHN Cancer Institute at Saint Vincent Hospital in Erie has oncologists who tailor treatment plans for each patient. And with starting care quickly being so crucial to outcomes, our cancer team typically meets patients within three days of diagnosis to discuss next steps.

Most patients can receive all of their treatments right at the Erie location, including some of the latest therapies and innovations. And if patients have more challenging cancers, they have direct access to additional AHN oncology experts who specialize in specific types of the disease.

That means top cancer care, closer to home, and a support team that's always close by.

An innovative treatment facility centered on patients.

Everyone has their own cancer journey.

That's why the patients you refer to the AHN Cancer Institute at Saint Vincent receive personalized care from clinicians they come to know and rely on.

The state-of-the-art facility has advanced technologies and therapies that target patients' cancers for the best possible outcomes.

And it's all in comfortable, peaceful surroundings where the staff comes to know and support each patient and their family.

The new, two-story, 38,000-square-foot institute, located adjacent to the hospital, is designed to make patients' experiences as welcoming, calming, and healing as possible. That includes spacious treatment areas with an abundance of natural light, and plenty of room for patients' loved ones to remain on-site for support.

Advanced treatments and high-quality care.

Surgery

Our highly experienced AHN surgeons perform procedures to prevent, diagnose, and treat cancer. For some cancers, we use robotics and other specialized techniques so the impact to the body is as minimal as possible. That often means small scars or none at all, less pain, and a pretty quick return to daily routines. Surgeons are included on a patient's care team when the need arises.

Chemotherapy

Our medical oncologists determine the most effective type of medical treatments to kill cancer cells, control their growth, or relieve pain symptoms. We use chemotherapy in combination with other treatments to either shrink tumors before surgery or radiation or to eliminate all cancer cells after other treatments have been performed.

Immunotherapy and targeted therapy

Our doctors treat some patients with immunotherapy, which boosts their immune systems to fight cancer cells. And we treat others by targeting cancer-eliminating drugs directly to the abnormal parts of the cell that create the disease.

Radiation therapy

We have advanced technology to deliver highly precise radiation directly to tumors, minimizing harm to surrounding healthy tissue and organs. Our technologies include respiratory motion management to continually locate a tumor, even as it moves when a patient breathes. This helps us direct radiation to the tumor and away from the heart and lungs, which is particularly helpful when treating breast cancer.

We also offer stereotactic body radiation therapy (SBRT), which administers very high doses of pinpoint-accurate radiation without an incision. The surgical precision of SBRT is useful in treating small and difficult-to-reach tumors in the brain and spine and can significantly reduce the number of treatments a patient needs.

Clinical trials

We discover new and better cancer treatments through clinical trials. A patient's care plan may include one of these cutting-edge treatments.

Specialists for every type of cancer.

**No one fights cancer alone.
Not patients. And not us.**

Each patient at the AHN Cancer Institute at Saint Vincent has a comprehensive care team, working together to ensure the best possible outcome.

And they also have the extra backing of a larger team of physicians known as tumor boards, each having deep expertise in cancer specialization. These clinicians discuss and determine the right combination of treatments, even therapies that target cancers based on a patient's genetic profile.

Through video conferencing, these meetings include doctors at all of our AHN Cancer Institute locations, including Saint Vincent Hospital. We do this so every patient has the same group expertise, no matter where they go for their doctor visits and treatments.

Collaboration with Johns Hopkins Medicine

When faced with recurring cancers that are among the most complex to treat, we collaborate with our colleagues at Johns Hopkins Sidney Kimmel Cancer Center in Baltimore, Maryland. We join forces on research and clinical trials and have peer-to-peer consultations.

Like you, we're motivated by helping patients.

So when we're exploring and discovering new ways to diagnose and treat cancer, we think big and creatively. Our doctors and scientists work together to come up with novel ideas and approaches. And when one looks promising, we have to test it, evaluate it, and test it again. It can take years to prove that a scientific breakthrough is safe and effective.

And telling a patient that we have new hope makes it all worth it.

With so many breakthroughs on the horizon, we've built a new research hub where our scientists can explore them. The AHN Cancer Institute at Allegheny General Hospital (AGH) in Pittsburgh is where we research theories, test clinical trials, and explore cutting-edge technology. All with the goal of detecting cancer earlier and treating it better while reducing the impact to patients' bodies and lives.

Developed at AGH. Practiced across AHN.

This new research facility is located in Pittsburgh, but the discoveries happening here are available to patients of all 20 of AHN Cancer Institute locations.

A man in a white lab coat stands with his arms crossed in front of a modern glass building. The building has a curved balcony with a glass railing. The man is looking off to the side. The background is a clear blue sky.

New leader is a difference maker.

David Bartlett, MD, brings three decades of cancer research, surgical oncology innovations, and proven leadership to his new role as chair of the AHN Cancer Institute. He's been a pioneer in abdominal cancer treatments and a dedicated, prolific researcher, including with the National Cancer Institute.

David Bartlett, MD
Chair, AHN Cancer Institute

“What is so impressive about the AHN Cancer Institute is that it’s expanding and growing in order to reach people in their communities,” Dr. Bartlett said. “And the staff are so dedicated to their patients and doing the right thing for the right reasons.”

Dr. Bartlett is passionate about researching treatments for patients with aggressive and complex cancers.

“The most rewarding aspect for me of being a physician is having patients who have lost hope and having the ability to say, ‘I think there is hope with a novel therapy that can make a big difference in their lives.’”

Supporting patients' physical and emotional needs.

Cancer care goes well beyond treating the disease. We focus on patients' total health before, during, and after their treatments, so they always have a support team in place.

These are some of AHN's offerings for oncology patients' unique needs.

One nurse to guide each patient

Patients have their own nurse navigator from beginning to end of their cancer journey, for comprehensive guidance and support.

Testing genes for hereditary cancer

If a patient has a type of cancer that poses an inherited cancer risk, we have genetic counselors who provide testing and management options.

Rehabilitating the body

Specially trained AHN oncology physical therapists can help minimize side effects and maximize a patient's quality of life.

Keeping the heart strong

Patients who may be at risk for heart troubles because of their treatments can receive care from our cardio-oncology specialists.

Holistic approach to treatment

Patients can have complementary therapies like meditation, massage therapy, yoga, and acupuncture.

Strengthening mental health

We have psychiatrists, social workers, and support groups to help patients with their mental well-being.

**Language accessibility and
nondiscrimination**

Allegheny Health Network (AHN) complies with applicable Federal civil rights laws and does not discriminate on the basis of race, color, national origin, age, disability or sex in its health programs and services. In order to treat individuals in a nondiscriminatory manner, AHN provides free communication aids and language assistance services.
