Do You Qualify?
If you have been unable to lose weight with diet and exercise programs alone, and are not considering gastric surgery, then you may qualify for the SMART Clinical Trial. The trial is evaluating the Obalon® Balloon for weight loss. The Obalon Balloon is an investigational device intended for weight loss without surgery or permanent changes to your anatomy.

Initial Qualification Criteria
✓ Age 22 - 64
✓ Body Mass Index (BMI) between 30 - 40
✓ Have not had prior weight loss surgery
✓ Are not currently considering weight loss surgery
✓ Able to attend regular visits at your local study center over a 1-year period

If you qualify and join the SMART Clinical Trial, you will receive study-related care at no cost, and may also be compensated for your time and travel.

To learn more about the SMART Trial, and to see if you might qualify, please call 1-855-8-STUDY-0 or visit www.BalloonTrial.com.

As with any medical device, there may be risks associated with the use of the Obalon Balloon and the endoscopic procedure to remove the balloons at the end of the therapy. You should plan to fully discuss the potential risks and benefits of participating in the SMART Clinical Trial with the physician managing the trial at your center.

THE OBALON® BALLOON
Changing the Way You Think About Weight Loss
The Weight Loss Struggle

It’s a story that’s all too common: you’ve tried multiple diet and exercise programs to lose weight, but have been unsuccessful and would never consider gastric surgery. For many people, diet and exercise alone aren’t enough to control the combination of factors that contribute to excess weight. However, losing weight can have a dramatic effect on your health and how you feel about yourself.

The Obalon® Balloon

The Obalon Balloon is an investigational device being evaluated in a clinical trial. The Obalon Balloon is a non-surgical, fully-reversible device intended for weight loss. Three lightweight balloons are placed in your stomach by simply swallowing a capsule and then inflated with gas. The balloons are intended to occupy space in your stomach to help you feel fuller, eat smaller portions and lose weight.

The Obalon Balloons reside in your stomach for a 6-month period and then are removed in a short, outpatient endoscopic procedure. Up to three balloons are placed over the therapy period.

The Obalon Balloon is only available in the United States as an investigational device in a controlled clinical trial. The Obalon Balloon has been commercially available and used in select countries outside the United States for over two years.

The SMART Clinical Trial

A select group of doctors in the U.S. are conducting a clinical trial to evaluate the safety and effectiveness of the Obalon Balloon for weight loss (the SMART Clinical Trial). If you participate in the SMART Trial, you will receive all study-related care at no cost and be compensated for your time and travel. The care includes the Obalon Balloon, as well as a support program overseen by a team of nutritionists and doctors. As a SMART Trial participant, you will be required to meet regularly with your local study team over a 1-year period.
